 9825A/B Product Information
## 9825A/B Common Specifications

The following specifications are common to both the 9825A and 9825B desktop computers:

| Tape | rtridge |
| :---: | :---: |
| Memory capacity | 250000 bytes |
| Read/write speed | $559 \mathrm{~mm} / \mathrm{s}(22 \mathrm{in} . / \mathrm{s})$ |
| Search speed (bidirectional) | $2286 \mathrm{~mm} / \mathrm{s}$ ( $90 \mathrm{in} . / \mathrm{s}$ ) |
| Transfer rate | 2750 bytes/s |
| Typical rewind time | 19 s (end-to-end) |
| Typical erase time | 40 s (one track) |
| Tape length | 42.67 m ( 140 ft ) |
| Size | $\begin{aligned} & 63.5 \times 82.5 \times 12.7 \mathrm{~mm} \\ & (2.5 \times 3.25 \times 0.5 \mathrm{in} .) \end{aligned}$ |
| Verification | automatic on recording |

Tape cartridges are intended for nominal program or data storage; the typical life cycle is $50-100$ hours, depending on the application. Environmental conditions of $25^{\circ} \mathrm{C}\left(77^{\circ} \mathrm{F}\right)$ and 20 to $50 \%$ relative humidity are most favorable for a long tape life. Tape life is decreased by a high duty cycle (percent of of time the tape is accessed during the total time the 9825 is in use), high turning resistance and continuous use for long periods of time (longer than one-half hour). It is suggested that tape transports be regularly cleaned and cartridges removed from drives after use.

For heavy usage of mass storage files, such as in consecutive file sorts or data base management applications,
flexible disc drives are recommended for optimum
performance and reliability.

## Printer

| Paper width | 57.15 mm (2.25 in.) |
| :---: | :---: |
| Speed | 180 lines/min |
| Font | $5 \times 7$ dot matrix; prints all the following characters in upper- and lowercase; up to 16 characters/line |

## Character Set

## 1-2 9825A/B Product Information

## Chapter

## 9825A/B Environmental/Installation

All values stated here are typical for a 9825 Desktop Computer, except where noted. These values are not meant as specifications and do not represent final approved values. Actual values will vary with individual machines depending on their memory configuration. The 9825 Technical Data Sheet is the only official specification of expected performance.

## Environmental Range

Operating temperatures $\ldots 5^{\circ} \mathrm{C}$ to $40^{\circ} \mathrm{C}$ ambient
Storage temperature $\ldots . .-40^{\circ} \mathrm{C}$ to $65^{\circ} \mathrm{C}$
Ambient humidity <80\%

## Size/Weight

| Height | 129.5 mm ( $5.1 \mathrm{in}$. ) |
| :---: | :---: |
| Width | 383.5 mm ( 15.1 in .) |
| Depth | 495.3 mm (19.5 in.) |
| Weight: |  |
| Net | $12.3 \mathrm{~kg}(27 \mathrm{lb})$ |
| Shipping | $24.5 \mathrm{~kg}(54 \mathrm{lb})$ |
| Cube | $0.12 \mathrm{~m}^{3}\left(4 \mathrm{ft}^{3}\right)$ |

## Power Requirements

Source $\ldots \ldots \ldots \ldots$| $110 \mathrm{~V}+5 \%,-10 \%$ |
| :--- |
|  |
|  |
|  |
|  |
| $220 \mathrm{~V}+5 \%,-10 \%$ |
| $220 \mathrm{~V}+5 \%,-10 \%$ |

Note: Voltage is switch-selectable.
Line frequency .......... 48 to 66 Hz
Consumption.
1.7 A @ 100V
1.5 A @ 120 V
0.8 A @ 220 V
0.75 A@240V
Maximum Power Consumption

| Voltage | Line | Current <br> (Amps) | Voltamps | True RMS <br> Watts | BTU/hr |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Setting | Voltage | (A) | 182 | 142 | 482 |
| 100 | 105 | 1.74 | 182 | 146 | 500 |
| 120 | 126 | 1.54 | 194 | 144 | 490 |
| 220 | 231 | 0.83 | 190 | 145 | 494 |
| 240 | 250 | 0.78 | 193 |  |  |

## Power Line Susceptability

The 9825A/B is type tested to withstand a transient of the following parameters:
10 microsecond pulse width.
0.5 microsecond rise time.

Amplitude is twice line voltage.

## 9825A/B Installation

## Power Cords

| Country of Use | Connector End View | Voltage Rating | Current Rating | Option Number | $\stackrel{\text { HP }}{\text { Part Number }}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Great Britain, Cyprus,Nigeria, Rhodesia, and Singapore |  | 250 | 13A | 900 | 8120-1351 |
| Australia, <br> New Zealand |  | 250 | 10A | 901 | 8120-1369 |
| Europe, Egypt, Saudi Arabia |  | 250 | 10 | 902 | 8120-1689 |
| United States, Canada, Japan, Mexico, Taiwan, Phillipines | NEMA 5-18P | 125 | 15A | 903 | 8120-1378 |
| United States |  | 250 | 15A | 904 | 8120-0698 |

## 9825A/B Configuration

## 9825 Mainframe Configurations

The following table lists the various configurations of the 9825 family of desktop computers. Memory and option ROMs shown for each refer to what the product consisted of at time of sale.

| Product/Option | RWM Size | Plug-In Option ROMs |
| :--- | ---: | ---: |
| 9825 A | 8 K Bytes |  |
| 9825 A, Opt. 001 | 16 K Bytes |  |
| 9825 A, Opt. 002 | 24 K Bytes |  |
| 9825 A, Opt. 003 | 32 K Bytes |  |
| 9825 S | 24 K Bytes | 98210 A and 98214A or 98216A |
|  |  |  |
| 9825 B | $24 / 32 \mathrm{~K}$ Bytes |  |
| 9825 T | 64 K Bytes |  |

## 9825A/S Memory Switch Settings

| OPTION | 8K BYTE BOARDS A22 |  | 16K BYTE BOARDS A23 |  | PROCESSOR A11 <br> RWM SWITCHES |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | BOARDS | CLIP POSITION | BOARDS | CLIP POSITION |

## 9825 Software Compatability

Listed below are HP applications packs and the equipment required to use them.

## Chapter 4

## 9825A/B Troubleshooting

## Troubleshooting Checklist

Here's a list of checkpoints to be verified when a 9825 doesn't seem to work correctly. Several items are identified and their respective page number in the 9825 CE Handbook are shown for reference.

| Checkpoint | Page |
| :---: | :---: |
| Power Source |  |
| Correct Voltage | 2-1 |
| Correct Frequency | 2-1 |
| Proper Receptacle Contact |  |
| Proper Grounding | 2-2 |
| Noise/Interference Free | 2-1 |
| Power Cord |  |
| Correct Connector Polarity | 2-2 |
| Wiring Continuity |  |
| Plugged in (Both ends) |  |
| Mainframe Configuration |  |
| Power Selector Switches |  |
| Voltage Select Correct | $2-2$ |
| Power Switch On |  |
| Fuse, correct size, rating and type | 8-5 |
| Power Supply |  |
| Output Voltages within Specifications | 6-1 |
| Power Harnesses connected to all assemblies |  |
| Processor |  |
| Clock Frequency within Specifications | 6-2 |
| All Memory Switches set correct (9825A/S only) | 3-1 |
| Memory and peripheral busses connected |  |
| Memory |  |
| 9825A/S |  |
| Correct Jumper Positions on A22 and A23 | 3-1 |
| Correct Option ROM for Application |  |
| 9825B/T |  |
| A24 RWM Size Switch Set Correct for Application | 9-2 |
| A24 9862-9872 Plotter Switch Set Correct for Application | 9-2 |
| Correct Option ROM for Application |  |
| Keyboard, Ribbon Cables Connected |  |
| Tape |  |
| Good Fuse on A61 |  |
| Ribbon Cables Connected |  |
| Data Cartridge Not Damaged |  |
| Clean Read-Write Head |  |
| Sense Lamps On |  |
| Printer |  |
| Proper Paper Installed Correctly |  |
| Print Head Correctly Aligned | 6-2 |
| Paper Advance Set Correct | 6-3 |
| Correct Wire Connections |  |
| Display |  |
| Connected to KDP board |  |
| Interfacing-Good fuses on A71 |  |

| Checkpoint | Page |
| :--- | :---: |
| General Situations |  |
| Wiring, |  |
| Ground Wires Properly Connected |  |
| Ribbon Cables Correctly Installed |  |
| Insulation Intact |  |
| Tight Connections on PC Boards and Wiring |  |
| PC Assemblies |  |
| Clean Edge Connectors |  |
| Cooling |  |
| $\quad$ Air Filter Clean |  |
| Proper Fan Operation |  |
| Cleanliness-all areas clean, no contamination |  |
| Software-program compatible with configuration |  |

## 9825A/B Flow Charts

By using these flow charts, a given set of symptoms, and valid test results you should be able to list probable causes. Lists are shown in the flow chants; the top item in each list is the most likely cause. These flow charts cannot diagnose all possible problems. Use of the System Test Tape is indicated where necessary.

Figure 4-1. Flow Chart 1

## 4-4 9825A/B Troubleshooting

Figure 4-2. Flow Chart 2

Figure 4-3. Flow Chart 3

## Chapter 5 9825A/B Diagnostics

## 9825A/B System Test

This covers the use of the $9825 \mathrm{~A} / \mathrm{B}$ System Test Tape in testing the operation of the 9825A/B without interfaces or peripheral products connected. For interface or peripheral tests, refer to their product section of the handbook.

## Procedure

## To Test the Calculator

1. Turn the calculator ON .
2. The following display should be seen.
$\square$
3. Insert the Test Cartridge so that the label on the cartridge faces the back of the calculator.
4. Press:

5. The following display should be seen.
Murateater

The symbol ${ }^{5}$ is used in this booklet to indicate that the shift key should be held down while the next key is pressed. Example:

$$
\begin{aligned}
& A=a \\
& A=A
\end{aligned}
$$

5-2 9825A/B Diagnostics
6. The following tests are available on the Test Cartridge:

1) R/W Memory Test

2 ROM Test
3 Processor Test
4 Tape Cartridge Test
5) Printer Test

6 Display Test
7 Key Switch Test
0 Abort (clears the calculator)
Run each of these tests by typing-in the test number followed by
 Refer to the next sections of this booklet for detailed information about each test.

At the end of each test the following display will be seen:

## شथ

type-in the next test number followed by $\square$
If the wrong key is pressed while typing the test number press sroo conmene and then type the correct test number.

If errors are printed or if the results are not as described for the tests, press:

and then repeat the test. If there are still errors, contact the nearest HP Sales and Service Office for assistance: office locations are listed at the back of the 9825 Operating and Programming Reference
*rtb $=$ return to binary

## Test Descriptions

The following display and printout should be seen.

20 to 80 sec onds

RH MEDOR TEST

RYH MEMORG TEST
GOMPLETE

| Memory Location | 9825A | 9825S | 9825B | 9825T |
| :---: | :---: | :---: | :---: | :---: |
| 70 k | Std. | Std. | Std. | Std. |
| 60 k | Opt. 001 | Std. | Std. | Std. |
| 50 k | Opt. 002 | Std. | Std. | Std. |
| 40 k | Opt. 003 | Std. | Std. | Std. |
| 30 k | n/a | n/a | n/a | Std. |
| 20 k | n/a | n/a | n/a | Std. |
| 10 k | n/a | n/a | n/a | Std. |
| 02 k | n/a | n/a | n/a | Std. |

* This memory location is enabled by jumper.

If there are no errors printed the R/W Memory is operating properly.

## 2 ROM Test

The following display and printout should be seen.

5 seconds

## ROM TEST

ROE On STETEM:

MATHFRGME

PQME $H$ ERETE

> Errors will be printed here If NONE is printed for errors, the ROM(s) are operating properly.

RUM TEST
WMPLETE
ROM Numbers and Titles

| ROM Address |  | 9825A/S | 9825B | 9825T |
| :---: | :---: | :---: | :---: | :---: |

| Flex. Disc | 56 K | n/a | n/a | Opt. |

[^0]3 Processor Test

The following printout should be seen.

```
TFOMFSकG% TEST
REOEESQ PH,SED
```

If there are no errors printed the processor is operating properly

## 4 Tape Cartridge Test

The following display and printout should be seen.
CT世, ب,

GBTBTE TES

Remove the Test Cartridge and insert a scratch cartridge*, then press (conwot

After about 45 seconds the following display and printout should be seen.

```
WHRTRDMGE MES
"0mHy=%
```

Remove the scratch cartridge, re-insert the Test Cartridge, and then press coovines,
*The scratch cartridge must be a known-good unprotected tape cartridge which does not contain wanted information

5－6 9825A／B Diagnostics

The following display and printout should be seen during the printer test．

5 seconds

## FRIHTEF TEST

$$
\begin{aligned}
& =============== \\
& ================
\end{aligned}
$$

4－
 ！＂\＃丰き戠＂
91234579：
EHEIGEFGHI JKLMHO F曰FSTHひ以XVZ［न］†

FFIHTEF TEST
EDPFLETE

The printout should duplicate the above sample
(6) Display Test

The following printouts and displays should be seen. Each display should be checked for missing or extra display dots.

> MSPMY TEST

OTPLA TEST
CTMPLETE

## Pressing

connowe) - will stop the display test, to allow more viewing time.
connove - again, will continue the display test.
stoo - will abort the display test.

7 Key Switch Test

The following display and printout should be seen

## KEYEGARCI TEST

Check the keys for proper operation by pressing each key as it is called for by the display. Remember to press before pressing (A). Leave shift key locked until display reads

```
,%%
```

Press (mo unlock shift) before pressing $z$.

The key sequence called for by the display is shown below.

An error message will be printed if

- the wrong keys are pressed four times in succession.
- the correct key fails to operate properly

If a key completely fails to operate, press any other key four times to continue the test.

After the last key (RESULT) is pressed the following printout should be seen.

```
REYEGAFG TEGT
COHFLETE
```

Pressing (i) conrinve) will abort the Calculator Test and return the calculator to normal operation

## Test Modifications

A group of tests can be run in succession by typing-in more than one test number betore pressing conrivet. The tests will run in numerical order regardless of the order in which they are typed.

Examples:

runs tests: 1, 2,3, and 4
$\square$
runs tests: $1,2,3,6$, and 7

## 9825A/S Extended Test Package

These tests work only on the 9825A/S. They do not work on the 9825B/T.
Setup: $\quad$ 1. Turn off power to the 9825A/S.
2. Remove Plug-In Option ROMs.
3. Remove Interface cables.
4. Insert Test ROM and Test RAM.
5. Tab on Extended Test Cartridge should be in RECORD.

Mode One Tests: Automatic Test sequence;

Programmed Tests: Test programs should be entered after completion of Mode 1. They are entered by typing and storing program lines as shown in this example:

```
O: cancel (Clearsprevioustestprogram.)
1: (Test Syntax) (See below fortest syntax)
2: cycle (Optional,willtestcontinuous.)
3: test (Mustbethelastline,)
```

After storing the program lines, press RUN

Test syntax for programmable tests:

Special Tests: Tests should be performed after completion of Mode 1. They are performed by typing and executing the statements shown below:

Test syntax for Special Tests. These require the Test ROM, Test RAM, and Extended Test Cartridge.

| Area to Test | Test Syntax to Execute, and Parameters | Error Displays/Printouts |
| :---: | :---: | :---: |
| Proc. \& Sys. ROM Test | trk1:ldp6 EXECUTE $\square$ Follow printed directions. | Error types are output to printer. |
| Key B/D | trk1;ldb3 EXECUTE <br> kbt EXECUTE <br> Display shows key to press. | Printout if keyswitch fails, or wrong key pressed 4 times in succession. Press any other key 4 times to continue with test. |
| Option RWM | trk1;ldb4 EXECUTE <br> rwt Option number $\square$ | First 16 errors printed. Failed address and bit numbers are shown. |
| Option ROM | trk1;1db10 EXECUTE <br> After test program loads, then execute this statement: rmvfy [ID number[,ID number]] Instructions are given. <br> Without ID numbers, all ROMs are tested. | Printout lists addresses of words that do not verify. |
| Option <br> ROM <br> Update | update ID number [,ID number] <br> Must include at least 1 ID. <br> Use ID numbers above. | This is used to store correct bit patterns from new, revised Option ROMs on the ETP tape. It is then used to test the Option ROM. |
| Add-on ROM Test | trk1;ldp8 $\square$ EXECUTE <br> Follow displayed instructions. | Error printout lists name of ROM; P/Ns printed out should not be ordered. |
| General <br> Test A | trk1:ldp11 EXECUTE <br> Follow displayed instructions. | Errors are output to printer and are the same for all other tests. |
| General <br> Test B | trk1:Idp12 EXECUTE <br> Follow displayed instructions. | Errors are output to printer and are the same for all other tests. |

## Control Keys Test

1．Turn on calculator，insert extended test cartridge
2．Type $\div:+1$. press $\begin{aligned} & \mathrm{E} \\ & \frac{y}{c} \\ & \frac{1}{c}\end{aligned}$
3．Press 5 ；the display should be 1 d ．
4．Press $\begin{aligned} & \frac{E}{X} \text { ，the test program should load．} \\ & \frac{1}{6} \text { ；}\end{aligned}$
5．Press the display should be rei．
6．Press ；the cartridge should rewind
7．Check the operations of the user－definable keys by performing the key strokes shown below：

［Itcen［T3（3）siome
8．Press（Lum K（lower case） $\begin{aligned} & \text { E } \\ & \underline{L} \text { ；the printout should be：}\end{aligned}$

```
                                    +1:*1+F
                                    なこ:マ2
                                    f% S
```

 rel＂＂，and the shift－lock LED should be on．

10．Press until the cursor is over the letter H ．
11．Press character antib
12．Press K E．
13．Press until the cursor disappears，then press until the cursor is in the space to the left of the word TEST．
14．Press $S$ srome；display should be $\mathbb{Q}$ ．

17．Use the or and
18．Press $(1) E$（ E （T）display should be 1 F．

22. Press the display key $\square$ five times. The first four presses should cause the display to
 hand side. The fifth press should not change the display.
23. Press the display key five times. The first four presses should shift the display back through $\mathrm{FT}, \mathrm{F}, \mathrm{F}$, and ए- to its original position. The fifth press should not change the display.

26. Press either snmf key; the shift-lock LED should go out.
27. Press aum; follow the instructions given on the printer and display. There will be four groups of instructions listed by the printer.
28. After doing all the steps in all four groups, type
29. Press $\begin{aligned} & \text { 眉; printer will start printing rows of brackets. } \\ & \text { d }\end{aligned}$
30. Press $\begin{aligned} & \text { KISEE }\end{aligned}$ printer should stop immediately.
31. Repeat steps 29 and 30 to verify the program will start again after a reset.

## Mainframe Statements Test

This is a short test of some processor actions which are not checked by the Control Keys Test and a bit-for-bit check of the mainfram ROMs. To run the test, follow this procedure:

2. Press $\begin{aligned} & \mathrm{E} \\ & \vdots \\ & \varepsilon_{0}\end{aligned}$
3. After the calculator makes the ROM checks, follow the instructions given by the printer.
4. Many "beeps" should be audible when the display shows =t.t.met.

## Add-On ROM Test

This test checks for the proper functioning of the Extended I/O ROM, General I/O ROM, String ROM, and Advanced Programming ROM. Instructions for running the test will appear on the display and printer. The tests can be completed in less than 30 seconds, and the printer will log any errors. To run the test, follow this procedure:

1. With power off, insert the ROMs to be checked
2. Turn power on and insert test cartridge.
3. Type धस स्ध

## Chapter 6 <br> 9825A/B Adjustments

## 9825A/B Sequence of Adjustments

Adjustments for the $9825 \mathrm{~A} / \mathrm{B}$ desktop computer should be performed in the following order:

1. Power Supply Voltages;
+12 Supply first, then
+7 Supply.
2. Processor Clock Frequency.
3. Printer print head alignment.
4. Printer paper advance.
5. Printer Intensity.

## 9825A/B Power SupplyAdjustments

The following tools are needed to adjust the power supplies:
1 Digital Multimeter (DMM)
1 1/8 inch flat tip screwdriver

1. Turn off the $9825 \mathrm{~A} / \mathrm{B}$ and remove the following:
a. Interface Cards.
b. Plug-In Option ROMs.
2. Turn on the $9825 \mathrm{~A} / \mathrm{B}$ and let it warm up for 10 minutes. No programs should be running, only the lazy " T " should be displayed.
3. Refer to the diagram below, locate the +12 and +7 volt test points and adjustments.
4. Ground DMM on the power supply heat sink or power module sheet metal.
5. Usethe DMM and adjust the +12 then the +7 volt supplies as follows:

$$
\begin{aligned}
& +12 \text { Volt, adjust R11, } \ldots .+11.95 \text { to }+12.05 \text { VDC } \\
& +7 \text { Volt, adjust R16, } \ldots .+6.9 \text { to }+7.1 \text { VDC }
\end{aligned}
$$

Note
Only the +12 Adjustment is on Rev. A and B power supplies.

# 9825A/B System Clock Frequency Adjustment 

CAUTION
THE CLOCK IS SET AT THE FACTORY; IT IS NOT NORMALLY ADJUSTED IN THE FIELD. IT IS NOT TO BE ADJUSTED INDISCRIMINATELY. IF THE CLOCK FREQUENCY EXCEEDS ITS TOLERANCE. ERRATIC OPERATION PRODUCING RANDOM ERRORS COULD RESULT.

The following tools are needed for adjusting the system clock:
Alignment tool.
Frequency counter.

1. Measure the clock frequency at the " 01 " test point using the counter.
2. Adjust the clock frequency to 6.0 MHZ plus or minus 0.1 MHZ .

## Note

If a counter is not available, key in and run this program:

```
0: dsp I; wait 10780; beep; jmp (I+10->I)=60
1: beep; wait 100; beep; dsp "DONE"' end
```

This program will beep every 10 seconds if clock frequency is 6.0 MHZ . The double beep should occur at 60 seconds, plus or minus 1 second.

## 9825A/B Printer Adjustments

The following tools are needed for printer adjustments:
1 Printhead Alignment Fixture 98240-67901
2 Printhead Alignment Tool 8710-0693
1 1/16 inch hex wrench
1 Adjustment Gage, "GO" 8750-0350
1 Adjustment Gage, "NO-GO" 8750-0351
1 Small bottle of enamel paint
1 1:8 inch flat tip screwdriver
9825A/B Print Head Alignment:

1. Install printer on alignment fixture. load paper in printer.
2. Loosen set screws with $1 / 16^{\prime \prime}$ hex wrench.
3. Turn on 9825 and fixture, insert alignment tools in holes.
4. Adjust print head until print across paper is darkest and even.
5. Turn off fixture and tighten set screws. don't overtighten.
6. Turn on fixture and verify print quality.

## 9825A/B Paper Advance Adjustment:

1. Install printer on alignment fixture. load about 6 feet of paper.
2. Turn on 9825 and fixture and verify the printout looks like this:

|  |  |
| :---: | :---: |
|  |  |
|  |  |
|  |  |
|  | 11118H\|IIIIIIIIItIIIIIIHIIII |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |

3. If not, adjust the paper advance until the above pattern is printed.
4. Lift printer off fixture and insert the white "GO" and yellow "NO-GO" gages between the lower foam pad and solenoid, holding them in place while printer is running, until the following printout occurs;

With "GO" gage inserted, normal printout.
With "NO-GO" gage inserted, compressed printout.
5. Turn fixture and 9825 off and seal paper advance with paint.

9825A/BPrinter Intensity Adjustment:

1. Reassemble the 9825 . Turn it on, store, and run this test program

0: frt "ZZZZZZZZZZZZZZZZ"; jmp 0
2. Observe the print intensity and adjust the potentiometer by the speaker on the KDP (A33) board until the print does not get darker as the adjustment is increased.
3. Back the adjustment off about $1 / 8$ turn.
4. Return the 9825 to normal operation.

7-2 9825A/B Supported Peripherals

# Chapter 8 9825A/B Replaceable Parts Field Repair Philosophy 

The 9825 mainframe assemblies are divided into three repair catagories:

| $\mathrm{X}=$ Exchange |  |  | $\mathrm{R}=$ Replace Comments |
| :---: | :---: | :---: | :---: |
| Assembly | Description | XCR |  |
| Case Parts | Covers, wire harnesses, ribbon cable assemblies not part of PC boards, air filter, fasteners, fan, power switch, and other mechanical items | R |  |
| Power | Power Module | R | Should be replaced as an assembly. Component repair is not recommended. |
| A51 | Power Supply | X | Without large metal heat sink. |
| Processor |  |  |  |
| A11 | 9825A/S Processor Assembly | X | With hinges/spacers. |
| A12 | 9825B/T Processor Assembly | X | With hinges/spacers. |
| Memory |  |  |  |
| A05 | 9825A/SSystem ROM Assembly | X |  |
| A12 | ROM Interface Assembly | R |  |
| A22 | 9825A/S 8K Byte RWM Assembly | X | Without hinges/spacers |
| A23 | 9825A/S 16K Byte RWM Assembly | X | Without hinges/spacers |
| A24 | 9825B/T 24/32K Byte RWM/ROM Assembly | X | Without hinges/spacers |
| A25 | 9825T 32K Byte RWM Assembly | X | Without hinges/spacers |
| 98210A | 9825A Option ROM Strings-Adv. Prog. | R |  |
| 98211A | 9825A/B Option ROM Matrix | R |  |
| 98212A | 9825A Opt. ROM 9862 Plotter-Gen. 1/O | R |  |
| 98213A | 9825A Opt. ROM Gen. I/OExt. I/O | R |  |
| 98214A | 9825A Opt. ROM 9862-Gen. I/O-Ext. I/O | R |  |
| 98215A | 9825A Opt. ROM 9872 Plotter-Gen. 1/O | R |  |
| 98216A | 9825A Opt. ROM 9872-Gen. I/O-Ext.I/O | R |  |
| 98217A | 9825A/B Opt. ROM 9885 Flex Disc Dr. | R |  |
| 98224A | 9825A/B Opt. ROM Systems Programming | R |  |
| 98228A | 9825T Opt. ROM 9885/9895 Flex Disc | R |  |
| Internal Peripherals |  |  |  |
| A33 | KDP Assembly | X | KDP Chips and speaker may be component level repaired. |
| A41 | Single Line Display Assembly | X |  |
| A61 | Tape Control Logic Assembly | X | With hinges/spacers. Fuse may be replaced. |
| A71 | I/O Interface Assembly | R |  |
| Printer | Thermal Printer Assembly | C |  |
| Transport | Tape Transport Assembly | X | Without sheet metal. EOT/BOT Lamp may be replaced with kit. |
| Keyboard | Keyswitch Assembly (New style) | C | Keyswitches and Shift Lock LED. |
| Keyboard | Keyswitch Assembly (Old style) | R | Replace with new style |

## 9825B/T Service Kits

Four Service Kits are used in support of the 9825B/T:
"A" FSI, $94-99 \%$, 09825-67199
"B" FSI, 81-93\%, 09825-67198
"C" FSI, 0-80\%, 09825-67197
"D" PSP, Tools, 09825-67100
The following is a sequential list of parts and tools in the $9825 \mathrm{~B} / \mathrm{T}$ Service Kits. The right hand column shows the kit the part/tool is in.

| Qty. | C/D | Part Number | Description | Kit |
| :---: | :---: | :---: | :---: | :---: |
| 1 | 7 | 1813-0051 | Print Head | C |
| 1 | 5 | 2110-0545 | Fuse Holder Cap | C |
| 1 | 2 | 3100-3364 | Power Switch | C |
| 2 | 4 | 3101-0469 | Keyswitch (Spacebar) | C |
| 5 | 4 | 3104-2390 | Keyswitch (All other keys) | C |
| 1 | 4 | 3160-0209 | Fan | A |
| 1 | 9 | 4208-0110 | Air filter | C |
| 1 | 8 | 5040-7433 | Keycap Removal Tool | D |
| 1 | 3 | 5061-0751 | Platen Assembly | C |
| 1 | 4 | 5061-0752 | Paper Sensor Assy. | C |
| 1 | 4 | 8120-2725 | Cable Assy. (A33 to A41) | C |
| 1 | 7 | 8120-3130 | Cable Assy., Monitor Bus (9825T only) | C |
| 1 | 2 | 8500-1251 | Tape Head Cleaner (4 oz.) | D |
| 1 | 9 | 8520-0023 | Cotton Swab (pkg. of 10) | D |
| 1 | 6 | 8710-0580 | Connector Extractor | D |
| 1 | 8 | 8710-0693 | Alignment Tool (Print head) | D |
| 1 |  | 8750-0350 | Paper Advance Gage, YELLOW, "GO", | D |
| 1 |  | 8750-0351 | Paper Advance Gage, WHITE, "NO-GO" | D |
| 1 | 5 | 9100-4096 | Transformer-Stator (Printer solenoid) | A |
| 1 | 1 | 9222-0662 | Conductive Bag, $8^{\prime \prime} \times 10^{\prime \prime}$ | D |
| 1 | 5 | 9222-0682 | Conductive Bag, $10^{\prime \prime} \times 14^{\prime \prime}$ | D |
| 1 | 9 | 09815-20602 | Paper Spindle (PC tool) | D |
| 1 | 4 | 09815-69902 | (RSTRD-67902) Tape Xport Assy. (without sheet metal) | C |
| 1 | 6 | 09825-61601 | Cable Assy., I/O Bus | B |
| 1 | 7 | 09825-61602 | Cable Assy., Memory Bus | A |
| 1 | 8 | 09825-61603 | Cable Assy., Power (Module to A51) | A |
| 1 | 9 | 09825-61604 | Cable Assy.. Tape Logic to Analog | C |
| 1 | 7 | 09825-61610 | Cable Assy, A12 to A11/A17 ground wire | C |
| 1 | 8 | 09825-61611 | Cable Assy., Thermistor (Printer) | C |
| 1 | 8 | 09825-66512 | ROM Interface Assembly | A |
| 1 | 6 | 98240-67901 | Printer Alignment Fixture | D |
| 1 | 9 | 09825-69517 | (RSTRD-66517) 9825B Processor Assembly | C |
| 1 | 8 | 09825-69524 | (RSTRD-66524) 9825B 24/32K Byte RWM/ROM Assembly | B |
| 1 | 9 | 09825-69525 | (RSTRD-66525) 9825T 30K Byte RWM Assembly | B |

| Qty. | C/D | Part Number | Description | Kit |
| :---: | :---: | :--- | :--- | :---: |
| 1 | 9 | $09825-69533$ | (RSTRD-66533) KDP Assembly | C |
| 1 | 3 | $09825-69541$ | (RSTRD-66541) Single Line Display | A |
| 1 | 1 | $09825-69551$ | (RSTRD-6́551) Powei Supply (with heat sink) | B |
| 1 | 3 | $09825-69561$ | (RSTRD-66561) Tape Cont. Logic Assembly | C |
| 1 | 2 | $09825-90036$ | $9825 A / B$ System Exerciser Tape | D |
|  |  |  |  |  |
| 1 | 3 | $09825-90037$ | $9825 A / B$ Systems Test Booklet | D |
| 1 | 2 | $09825-90200$ | $9825 A / B$ Operating \& Programming Manual | D |
| 1 | 6 | $09825-91030$ | $9825 A / B$ Service Manual | D |
| 1 | 6 | $98240-67901$ | Printer Alignment Fixture | D |

For support and repair of the 9825A/S computers, the following assemblies should be obtained and carried in kits as indicated:

| Qty. | C/D | Part Number | Description | Kit |
| :---: | :--- | :--- | :--- | :---: |
| 1 |  | $09825-69511$ | (RSTRD-66511) 9825A/S Processor | B |
| 1 |  | $09825-69905$ | (RSTRD-67905) 9825A/S System ROM | B |
| 1 |  | $09825-69522$ | (RSTRD-69522) 9825A 8K Byte RWM Assembly | B |
| 1 |  | $09825-69523$ | (RSTRD-66523) 9825A 16K Byte RWM Assembly | B |
| 1 |  | $98219-67900$ | $9825 A /$ Extended Test Package | D |

## 9825A/B Replacement Parts

Parts lists show new part numbers. Total Quantity (TQ)column shows number of parts per 9825. A " V " in the TQ column indicates quantity varies with options installed or application.

| Assembly Level | Reference Designator | CD | $\begin{gathered} \mathrm{HP} \\ \text { Part No. } \end{gathered}$ | TQ | Description |

## 9825A/B Customer Training Courses

| Name of Course | Where Conducted | HP Part Number |
| :--- | :--- | :---: |
| 9825A/B Service Training | at Customer Site | $09825-30100$ |
| 9825A/B Operating \& Programming | Various Field Offices | 98524 A |
| 9825A/B I/O Programming | Various Field Offices | 98525 A |

## Error Codes

An error in a program sets the program line counter to line 0 . Press the continue key to continue the program from line 0 . Execute the continue command with a line number to continue at any desired line (such as: cont 50).

| 00 | System error. |
| :---: | :---: |
| 01 | Unexpected peripheral interrupt. |
| $02^{1}$ | Unterminated text. |
| $03^{1}$ | Mnemonic is unknown. <br> Mnemonic not found because disc may be down. (9825 only) |
| 04 | System is secured. |
| 05 | Operation not allowed: line cannot be stored or executed with line number. |
| $06^{1}$ | Syntax error in number. |
| $07^{1}$ | Syntax error in input line. |
| 08 | Internal representation of the line is too long (gives cursor sometimes). |
| 09 | gto, gsb, or end statement not allowed in present context. <br> Attempt to execute a next statement either from keyboard while for/next loop using same variable is executed in program or from program while for/next loop using same variable is executed from keyboard. Attempt to call function or subroutine from keyboard. |
| $10^{1}$ | gto or gsb statement requires an integer. |
| 11 | Integer out of range or integer required; must be from -32768 thru +32767 . |
| $12^{1}$ | Line cannot be stored: can only be executed. |
| 13 | ent statement not allowed in present context. |
| 14 | Program structure destroyed. |
| 15 | Printer out of paper or printer failure. |

String Variables ROM not present for the string comparison. Argument in relational comparison not allowed.
Parameter out of range.
Incorrect parameter.
Bad line number.

Missing ROM or binary program. The second number indicates the missing ROM. In the program mode, the line number is given instead of the ROM number. Displayed number and missing item:

1 Binary Program<br>4 Systems Programming ROM<br>59826 HPL Extension<br>6 Strings ROM<br>8 Extended I/O ROM<br>9 Advanced Programming ROM<br>10 Matrix ROM<br>11 Plotter ROM<br>12 General I/O ROM<br>17 Disc ROM

Line is too long to store.
Improper dimension specification.
Simple variable already allocated.
Array already dimensioned.
Dimensions of array disagree with number of subscripts.
Subscript of array element out of bounds. P-number reference is negative.
Undefined array.
ret statement has no matching gsb statement.
Cannot execute line because a ROM or binary program is missing.
Special function key not defined.
Non-existent program line.
Improper data type.
Non-numeric value in for statement or in fts or fti function.
Data types do not match in an assignment statement.
Display overflow due to pressing a special function key.
Improper flag reference (no such flag).
Attempt to delete destination of a gto or gsb statement.
Display buffer overflow caused by dsp statement.
Insufficient memory for subroutine return pointer. Memory overflow during function or subroutine call.
Insufficient memory for variable allocation or binary program.
Insufficient memory for operation.
Memory overflow while using for statement or while allocating local p-numbers.
No cartridge in tape transport.
Tape cartridge is write protected. (Slide record tab to other position for recording.)
Unexpected Beginning-Of-Tape (BOT) or End-Of-Tape (EOT) marker encountered. Tape transport failure.
Verify has failed.
Attempted execution of idf statement without parameters or mrk statement when tape position is unknown.
Read error in file body.
Read error in file head.

End-Of-Tape (EOT) encountered before specified number of files were marked.

51 or 52 Memory configuration error for attempted Idm statement. For example, a ROM present when memory was recorded is now not present (see error 20), or attempting to load a memory file recorded on a 9825A into a 9825B.
Memory files are not compatible between the 9825A and 9825B. Only the program portion can be recovered by loading the memory file into the original machine and doing a rcf. This program file can then be loaded into any 9825 with the Idf statement.
53 Negative parameter in cartridge statement.
54 Binary program to be loaded is larger than present binary program and variables have been allocated.
Illegal or missing parameter in a cartridge statement.
Data list is contiguous in memory for a cartridge statement.
Improper file type.
Invalid parameter in rcf statement; "SE" or "DB" expected.
Attempt to record a program or special function keys which do not exist.
Attempt to load an empty file or the null file (type $=0$ ).
The line referenced in an ldf or Idp statement does not exist. If the line containing the Idf or ldp statement has been overlaid by the load operation, the line number in the display may be incorrect.
Specified memory space is smaller than cartridge file size.
Cartridge load operation would overlay subroutine return address in program; load not executed.

Disc load operation would overlay gsb return address: load not executed.
Attempt to execute Idk. Idf (program file), or Idp during live keyboard statement.
get, chain or getk not allowed from live keyboard mode or during an ent statement.
65
File not found.
File specified in the previous fdf statement does not exist
Default values associated with errors 66 thru 77 when flag 14 is set are explained in the programming chapter of the operating and programming manual.

Division by zero.
$A \bmod B$, with $B$ equal to zero.
Square root of negative number.
68
Tan ( $\mathrm{n} * \pi / 2$ radians).
$\operatorname{Tan}$ ( $\mathrm{n} * 90$ degrees)
Tan ( $\mathrm{n} * 100$ grads).
where n is an odd integer
In or log of a negative number.
70
In or log of zero.
71
asn or acs of number less than -1 or greater than +1 .

Negative base to non-integer power.
Zero to the zero power ( $0 \uparrow 0$ ).
Storage range overflow.
Storage range undertlow.
Calculation range overflow.
Calculation range underflow.
Relational operator in for statement not allowed. No closing apostrophe.
A for statement has no matching next statement.
A next statement encountered without a previous for statement.
Non-numeric parameter passed as a p-number.
No return parameter for a function call.
No functions or subroutines running. Improper p-number.
Attempt to allocate local p -numbers from the keyboard.
Wrong number of parameters in fts. stf. fti, or itf function. stf or itf parameter must be a string (not a numeric). stf or itf parameter contains too few characters.
Overflow or underflow in fts function.
Overflow in fti function.
String Variables ROM missing for stf or itf functions.
Errors B0 thru B8 may result during the binary disc initialization and disc error recovery routines.

B0 Wrong syntax, argument out of range or variable not properly dimensioned.
Are than six defective tracks on the disc.
B2 Verify error. Boots on the disc not identical to boots on the cartridge.
B3 dtrk or tinit not allowed because error information lost or error not d5, d6, d7 or d9.
Attempt to access record for error correction which isn't part of data file.part of buffer.

Missing Disc or String ROM.
Track still bad after tinit.
Missing General I/O or Extended I/O ROM.
Incorrect number of parameters.
Improper parameter specified.
Wrong parameter type.
Illegal buffer type for bred statement.
Key buffer overflow.
Too large or wrong sign of parameter.
C7
Improper execution of store statement.
C8
Illegal use of kret.
Missing 98036A Interface card.
D0
Improper argument in disc statement.
D1
Disc argument out of range.

| D2 | Improper file size (must be from 1 thru 32767). No lines to store for save or savek. |
| :---: | :---: |
| D3 | Invalid file name. |
| D4 | File not found. |
| D5 | Duplicate file name. Attempting to copy a non-data file to an existing file. |
| D6 | Wrong file type. |
| D7 | Directory overflow. |
| D8 | Insufficient storage space on disc. |
| DISC IS DOWN (98217A ROM) |  |
|  | ACCESS DISC CONTROLLER (98228A ROM) <br> Computer cannot access the disc controller. |
| d0 | Firmware/driver out of synchronization. <br> More than six defective tracks in a row (Press RESET) or too many defective tracks with 98228 A init. |
| d1 | All drives in system not powered on. |
| d2 | Door opened while disc being accessed. |
| d3 | Disc not in drive or drive not present. |
| d4 | Write not allowed to protected disc. |
| d5 | Record header error (error recovery routine.) |
| d6 | Track not found (use error recovery routine.) |
| d7 | Data checkword error. (use error recovery routine.) |
| d8 | Hardware failure (Press RESET). |
| d9 | Verify error. Data not readable under reduced margins (reprint data). |
| E0 | General I/O ROM missing. HP-IB error under interrupt. |
| E1 | Wrong number of parameters. |
| E2 | Improper buffer device or equate table usage. Multiple-listeners error. Buffer busy. |
| E3 | Wrong parameter type. |
| E4 | Timeout error. |
| E5 | Buffer underflow or overflow. |
| E6 | Parameter value out of range. |
| E7 | Parity failure. |
| E8 | Improper use of iret statement. Attempt to DMA with HP-IB. Buffer or select code is busy |
| E9 | Illegal HP-IB operation. |
| F0 | File overflow when read or print executed. |
| F1 | 98217A bootstraps not found (reload bootstraps). Wrong memory configuration for 98228A ROM. |
| F2 | String read but wrong data type encountered. |
| F3 | Attempt to read data item but type doesn't match. |
| F4 | Availability table overflow (repack). |
| F5 | Attempt on end branch from other than running program. |
| F6 | Unassigned data file pointer. |

| F7 | Disc is down; line cannot be reconstructed. (98217A ROM only). |
| :---: | :---: |
| F8 | Disc is down and STOP pressed. |
| F9 | System error (save files individually and reinitialize). |
| G1 | Incorrect format numbers. |
| G2 | Referenced format staiement has an error. |
| G3 | Incorrect I/O parameters. |
| G4 | Incorrect select code. |
| G5 | Incorrect read parameter. |
| G6 | Improper conv statement parameters. |
| G7 | Unacceptable input data. |
| G8 | Peripheral device down. |
| G9 | Interface hardware problem. |
| M1 ${ }^{1}$ | Syntax error. |
| M2 | Improper dimensions. Array dimensions incompatible with each other or incompatible with the stated operation. |
| M3 | Improper redimension specification. New number of dimensions must equal original number; new size cannot exceed original size. |
| M4 ${ }^{1}$ | Operation not allowed. An array which appears to the left of $\rightarrow$ cannot also appear on the right. |
| M5 | Matrix cannot be inverted. Computed determinant $=0$. |
| 9862A | ter ROM Error Codes |
| P1 | Wrong state. <br> Statements executed out of order. |
| P2 | Wrong number of parameters. |
| P3 | Wrong type of parameters. Parameters for a label statement must be expressions, text, or string variables. |
| P4 | Scale out of range. Maximum value is less than or equal to the minimum value. |
| P5 | Integer out of range. Pen control parameter is out of the range - 32768 thru - 32767 or the select code is not 0 or in the range 2 thru 15. |
| P6 | Character size out of range. Width or height in letter statement is zero or there is an integer overflow in csize calculations or results. |
| P7 | Not used. |
| P8 | Axes origin off-scale. $\mathrm{X}, \mathrm{Y}$ specified for axis statement doesn't fall on plotter surface. |
| PLT | Check interface connection and select code setting; be sure LINE and CHART |
| DOWN | HOLD are on. |
| 1 Press the RECALL key to position the cursor at the location of the error. |  |
| 1 Press the | position the cursor at the location of the error |

## Graphics/Plotter ROM (HP-GL) Error Codes

P1
Attempt to store into constant. Occurs when one or more parameters in a dig statement are constants rather than variables.
P2 Wrong number of parameters. Occurs on instructions with numeric-only parameter lists (scl, ofs, plt, iptl, cplt, xax, yax, lim, dig, csiz, line, pen\#, and psc). In certain unusual cases where a parameter list contains user-level function calls, an instruction having an incorrect number of parameters may be executed.

| P3 | Wrong type of parameter or illegal parameter value. |
| :---: | :---: |
| P4 | No HP-IB device number specified. Occurs when psc parameter is from 0 thru 14 and an HP-IB card is at the corresponding select code. |
| P5 | Pen control value not from - 32768 thru 32767. Hardware transmission error occurs between plotter and computer. |
| P6 | No HP-IB card at specified select code. |
| P7 | axe or ltr statement encountered: these are 9862 Plotter commands only. |
| P8 | Computer STOP key cancelled operation. Occurs when the plotter fails to respond for three seconds after the STOP key has been pressed. |
| p0 | Transmission error. The calculator has received an illegal ASCII input from the plotter. |
| p1 | Instruction not recognized. The plotter has received an illegal character sequence. |
| p2 | Wrong number of parameters. Too many or too few parameters have been sent with an instruction. |
| p3 | Bad parameter. The parameters sent to the plotter with an instruction are out of range for that instruction. |
|  | by write (wrt) and read (red) statements to an external plotter will typically be next executed plotter ROM statement. This can be avoided by using an output (wrt select code, "OE":) followed by a read statement (red select code, varirerrors after read or write statements that address the plotter. |

S0 Invalid set of strings in data list of ldf statement.
S1 Improper argument for string function or string variable.

SPARE
DIR.

More parameters than expected for string function or string variable.
Accessing or assigning to non-contiguous string, num function of null string.
Trying to find the value of non-numeric string or null string.
Exponent too large.
Exponent format invalid (e.g.. $1 e++$ ).
Invalid destination type for string assignment.
Parameter is zero. or negative. exceeded dimensioned size. Invalid sequence of parameters for string variable.
String not yet allocated.
String previously allocated.
Maximum string length exceeded: additional string length must be specified in dim statement.
Printed when the spare disc directory (backup track) automatically replaces the main directory.

## Option ROM Syntax and Errors

The following syntax and error messages require the appropriate option ROM be plugged into your Desktop Computer. See the alphabetical listing for syntax and error descriptions.

## Advanced Programming ROM

Syntax: cll, for, fti, fts, itf, next, stf, xref.
Errors: A0 through A9.

## 98217A Disc ROM

Syntax: asng, boot, cat, chain, copy, dirc, drive, dtrk, dump, files, get, getb, getk, getm, itit, kill, killall, load, ltrk, on end, open, renm, repk, resave, rprt, rread, save, savek, savem, sprt, sread, tinit, type, vfyb, voff, von.
Errors: B0 through B8, D0 through D9, F0 through F9, d0 through d9.

## 98228A Disc ROM

Syntax: asgn, cat, chain, copy, drive, dtype dump, files, get, getb, getk, getm, init, kill, killall, load, on end, open, renm, repk, resave, rprt, rread, save, savek, savem, sprt, sread, type, von, voff.
Errors: D0 thru D9, d0 thru d9, F0 thru F9.

## Extended I/O ROM

Syntax: add, band, bit, buf, cli, clr, cmd, cmp, ctbl, dev, dto, eir, eor, equ, iof, ior, ios, iret, lcl, llo, mdec, moct, on err. oni, otd, par, pct, pol, polc, polu, rdi, rds, rem, rot, rqs, shf, tfr, time trg, wti.
Errors: E0 through E9.

## General I/O ROM

Syntax: conv, fmt, list\#, rdb, rds, red, wrt, wtb, wtc.
Errors: G1 through G9

## Matrix ROM

Syntax: aprt, ara, dim, idn, ina, inv, ldf, mat, rcf, rdm, smpy, trn
Errors: M1 through M5

## Chapter 11 <br> 9825A/B Service Notes

[^0]:    1 Onty the 98217A ROM can be irstalled in the 9825A. S. and B However, either the 98217A or the 98228A Fiexible D.sc ROMs may be rstalled ir the 9825T It the 98228 A is ins:alled in the 9825 T . it resides a: bo:h the 30 K and 56 K tocations
    2 Either the matrx or the Sustems Programming ROM mav be installed in the 98254 $S$ or B cumpu'ers tu: never both ROMs
     ra:r a ROM :"a, aso be risamec ; so : resides at 36k.

[^1]:    Notes:
    19895 Opt ROM is in the 98228 A Plug-In Option ROM. It functions only with the 9825 T configuration with a Rev. B or higher A12 assembly
    2 Systems Prog. ROM is on the A24 board in a 9825 T configuration. Enabled by the A25 board; addresses differ from the 98224A Option ROM
