## SUPPORTED MESSAGE SETS

---

A number of ISDN D-Channel Layer 3 Message Sets are available to support all application monitor and simulation tests. CCITT is the international message set and is provided as the default to all ISDN users.

Contact your IDACOM/HP sales representative to either purchase additional sets and/or update existing message sets.

The following table contains a complete list of all currently available message sets and the corresponding release dates and numbers.

Message Set	Description	Release Date	Release #

## PREFACE

---

This manual is intended to provide a list of message identifiers, information element identifiers, and information element structures for the ATT\_5E6 Message Set. Refer to the ISDN Programmer's Manual for a list of identifiers and structures for the CCITT (default) message set.

This manual is not intended to provide basic user instruction, but rather provides examples which apply standard techniques for writing layer 3 test scripts using the Interactive Test Language (ITL). Refer to the Programmer's Reference Manual for general programming information, and the ISDN Programmer's Manual for more information and examples regarding ISDN test scripts. Refer to the machine specific User Manual for a quick reference to the basic operation of the protocol tester and for instructions to load and operate the software.

IDACOM reserves the right to make any required changes in this manual without prior notice, and the user should contact IDACOM to determine if any changes have been made. No part of this manual may be photocopied, reproduced, or translated without the prior written consent of IDACOM.

**1****INTRODUCTION**

---

This message set is implemented in accordance with: AT&T 5D5-900-321, March 1989, 5ESS Switch ISDN Basic Rate Interface Specification, 5E6 Generic Program, Issue 1.01.

The message set name (ATT\_5E6) is used with the LOAD\_MESSAGE\_SET command or the *Load Message Set* function key under the **MessageSet** topic. This name is also displayed on various menus, and is used to identify the message set variation when layer 3 complete report format is selected. The corresponding entry on the Message Set Selection Menu identifies the message set name, description, and release number:

**ATT\_5E6                   AT&T 5D5-900-321, 5E6 Generic Program (03/89)                   R01**

This message set contains unique identifiers which can be used in ISDN test scripts to reference received and transmitted messages. These identifiers are listed in three sections:

- Message Type Identifiers
- Information Element Identifiers
- Information Element Structures (including parameter field selectors and associated field values constants)

The following subsections provide some examples illustrating the use of each of these types of identifiers. Refer to the ISDN Programmer's Manual for more information and detailed examples.

---

## **1.1 Using Message Identifiers**

Message identifiers uniquely identify a message type in both received and transmitted messages, and are expressed in the following form:

M#xxxx (eg. M#SETUP)

In addition, the following default identifiers (specific received messages only) are also included with each message set:

- M#ANY (any valid message)
- M#INVALID (an invalid message)
- M#UNDEF (an unknown/undefined message type)

**Example 1:**

After receiving a Setup message, perform an action (eg. send a Setup Acknowledge response, increment a counter, etc.).

```
M#SETUP ?L3_MSG
ACTION[
    ( code specifying action taken if Setup message received )
]ACTION
```

**Example 2:**

Send an Alert message in an I frame complete with desired information elements.

```
M#ALERT MESSAGE>
    I#DISPLAY
    I#SIGNAL
<SEND
```

Message identifiers can also be used for filter/trigger management from within a script.

**Example 3:**

Set the display/report filter to only pass Setup and Connect messages.

```
R_FILTER          ( Select the display filter )
F3=NONE          ( Block all message types )
M#SETUP F+MSG    ( Pass Setup messages )
M#CONN  F+MSG    ( Pass Connect messages )
```

---

## 1.2 Using IE Identifiers

IE identifiers uniquely identify an information element in both received and transmitted messages, and are expressed in the following form:

I#xxxx (eg. I#CAUSE)

**Example 1:**

Determine if the Cause IE appears in the last received message at least once.

```
I#CAUSE 1 ?L3_IE
IF
    ( code specifying action taken if the first Cause IE is found )
ELSE
    ( code specifying action taken if the first Cause IE is not found;
        ie: none present )
ENDIF
```

**Example 2:**

Prepare a Cause IE for later inclusion and transmission within a message.

```
I#CAUSE ELEMENT>
  ALL_EXCLUDED
  OCTET_3 INCLUDED
  OCTET_4 INCLUDED
  OCTET_5 INCLUDED
<ELEMENT
```

Also in this group are octet identifiers which uniquely identify an octet number that can be used for any IE that contains that octet number. Octet identifiers are used in both received and transmitted messages and are expressed in the following form:

OCTET\_xx (eg. OCTET\_3.1)

**Example 1:**

Determine if Octet 3A is present in the Cause IE of the latest message received.

```
I#CAUSE OCTET_3A ?L3_OCTET
IF
  ( code specifying action taken if the octet is present;
    ie: process the specified Recommendation )
ENDIF
```

### **1.3 Using IE Structures**

Information element structures consist of the information element parameter field selectors and the associated field value identifiers.

The parameter field selectors are expressed in the following form:

->xxx\_yyyy (eg. ->BC\_CODING\_STANDARD)

where:    xxx = the information element associated with that parameter field  
                     (eg: Bearer Capability)  
               yyyy = the parameter field (either a string or a bit field)

The field value identifiers are expressed in the following form:

#xxxxx (eg. #INTERNATIONAL = 0b00000001)

All parameter field selectors are used with the \*DEC and \*COD structure indicators. \*DEC provides the base address of the decoder parameter structure. When used with a field selector, decoded parameter values can be accessed. \*COD complements \*DEC and provides the base address of the coder parameter structure for the current connection. The contents of specific parameter fields can then be changed prior to transmission.

**Example 1:**

Depending on the contents of the received Bearer Capability Coding Standard parameter field (Octet 3, 2 bits), perform one of two different actions.

```
*DEC ->BC_CODING_STANDARD @      ( Obtain the received value )
#CCITT =                      ( Compare with identifier )
IF
    T." Coding Standard is CCITT" TCR
ELSE
    T." Coding Standard is not CCITT" TCR
ENDIF
```

 **NOTE**

*The preceding example uses a bit field and @ (fetch); ! (store) and T. (print value) can also be used. If the parameter is a string (a sequence of one or more characters), !STRING or T.TYPE can be used.*

**Example 2:**

Set the appropriate values of the two parameter fields of Octet 4 of the Bearer Capability IE prior to transmission.

```
#CIRCUIT_MODE *COD ->BC_TRANSFER_MODE !
#384KBIT/S    *COD ->BC_TRANSFER_RATE !
```

->FI_NUMBER_OF_BUTT	Number of buttons, Octet 5
( numeric value )	<i>range 0 through 255</i>
->FI_ARRAY	Status Bit Array, Octet 6 *
( hex characters )	<i>max. length 32 octets</i>

---

#### 4.15 Keypad IE (I#KEYPAD)

Possible octet inclusions/exclusions:

OCTET\_3

---

->K_KEYPAD	Keypad information, Octet 3 *
( IA5 characters )	<i>max. length 32 octets</i>

---

#### 4.16 Keypad Control IE (I#KEYPAD\_CON)

Possible octet inclusions/exclusions:

OCTET\_3

---

->KC_CR_VALUE_TYPE	Call Ref Value Type, Octet 3
#NULL_CR	<i>Null Call Reference</i>
#NON_NULL_CR	<i>Non-Null Call Reference</i>

## 4.17 Low Layer Compatibility IE (I#LOW\_LAY\_COMP)

Possible octet inclusions/exclusions:

OCTET\_3, OCTET\_4, OCTET\_4A, OCTET\_4B, OCTET\_5, OCTET\_5A

->LL_CODING_STANDARD	Coding standard, Octet 3
#CCITT	<i>CCITT standardized in Q.931</i>
#INTERNATIONAL	<i>Other international standards</i>
#NATIONAL	<i>National standard</i>
#NETWORK_SPECIFIC	<i>Standard specific to the network</i>
->LL_TRANSFER_CAP	Info. trans. cap., Octet 3
#SPEECH	<i>speech</i>
#UNRESTRICTED	<i>unrestricted digital information</i>
#RESTRICTED	<i>restricted digital information</i>
#3.1KHZ_AUDIO	<i>3.1 kHz audio (modem)</i>
->LL_TRANSFER_MODE	Transfer mode, Octet 4
#CIRCUIT_MODE	<i>circuit mode</i>
#PACKET_MODE	<i>packet mode</i>
->LL_TRANSFER_RATE	Info. transfer rate, Octet 4
#PACKET	<i>used for packet transport mode</i>
#64KBIT/S	<i>64 kbit/s</i>
->LL_STRUCTURE	Structure, Octet 4a
#DEFAULT	<i>Default</i>
#8KHZ_INTEGRITY	<i>8 kHz integrity</i>
#SDU_INTEGRITY	<i>Service data unit integrity</i>
#UNSTRUCTURED	<i>Unstructured</i>
->LL_CONFIGURATION	Configuration, Octet 4a
#POINT_TO_POINT	<i>Point-to-point</i>
->LL_ESTABLISHMENT	Establishment, Octet 4a
#DEMAND	<i>Demand</i>
->LL_SYMMETRY	Symmetry, Octet 4b
#BIDIRECT_SYMMETRIC	<i>Bidirectional symmetric</i>
#BIDIRECT_ASYMMETRIC	<i>Bidirectional asymmetric</i>
#UNIDIRECT_ORG->DST	<i>Unidirectional ( orig -&gt; dest )</i>
#UNIDIRECT_DST->ORG	<i>Unidirectional ( dest -&gt; orig )</i>
->LL_TRANSFER_RATE_4B	Info. transfer rate, Octet 4b
#PACKET	<i>used for packet transport mode</i>
#64KBIT/S	<i>64 kbit/s</i>
->LL_LAYER_ID	Layer Ident., Octet 5
#LAYER1	<i>User information layer 1 protocol</i>
#LAYER2	<i>User information layer 2 protocol</i>
#LAYER3	<i>User information layer 3 protocol</i>

## 4.18 Management IE (I#MANAGEMENT)

Possible octet inclusions/exclusions:

OCTET\_3, OCTET\_4, OCTET\_5, OCTET\_6, OCTET\_7, OCTET\_8, OCTET\_9

->MM_PROTOCOL_DISCR	Management PD, Octet 3
( numeric value )	<i>range 0 through 255</i>
->MM_TRANS_REF	Transaction Ref., Octet 4
#SYNC_OP	<i>Synchronous Operation</i>
->MM_OP_CLASS	Operation Class, Octet 5
#UNCONF_OP	<i>Unconfirmed Operation</i>
#CONF_OP	<i>Confirmed Operation</i>
#RETURN_RESULT	<i>Return Result</i>
#RETURN_RESULT_CONT	<i>Return Result Continued</i>
#RETURN_ERROR	<i>Return Error</i>
#REJECT	<i>Reject</i>

---

->MM_OP_TYPE	Operation Type, Octet 5
#ACTION	<i>Action</i>
#EVENT_REPORT	<i>Event Report</i>
#GET	<i>Get</i>
#SET	<i>Set</i>
->MM_MANAG_CODE	Param. Group Code, Octet 6
#UNSPEC_ERROR	<i>Unspecified Error</i>
#VIOLATION	<i>Protocol Violation</i>
#UNRECOG_OP	<i>Unrecognized Operation</i>
#NO_NONSYNC	<i>No Non-Synchronous Operation</i>
#ACT_LOOPBACK	<i>Activate Loopback</i>
#DEACT_LOOPBACK	<i>Deactivate Loopback</i>
#RESET	<i>Reset</i>
#INIT_REQ	<i>Initialization Request</i>
#SERV_STATE_CHG	<i>Endpoint Service State Change</i>
#SERV_PROF_INFO	<i>Service Profile Information</i>
#ADDR_INFO	<i>Address Information</i>
#CALL_STAT_INFO	<i>Call Status Information</i>
#EQUIP_INFO	<i>Equipment Information</i>
->MM_PARAM_ID	Parameter Ident, Octet 7
#SPID	<i>Service Profile Identifier (SPID)</i>
#EPID	<i>Endpoint Identifier (USID/TID)</i>
#CRID	<i>Call Reference Identifier</i>
#CSID	<i>Call State Identifier</i>
#CHID	<i>Channel Identifier</i>
#SERVICE_STATE	<i>Service State</i>
#SERVICE_MSG_ERROR	<i>Service Message Error Code</i>
#LOOPBACK_LOC	<i>Loopback Location</i>
#SUPP_CAPAB	<i>Supplementary Capabilities</i>
#CAUSE_ID	<i>Cause Identifier</i>
->MM_PARAM_LENGTH	Parameter length, Octet 8
( numeric value )	<i>range 0 through 255</i>
->MM_PARAM	Parameter contents, Octet 9 *
( hex characters )	<i>max. length 10 octets</i>

---

#### 4.19 Origination Call Appearance IE (I#ORIG\_CALL\_APP)

Possible octet inclusions/exclusions:

OCTET\_3

->OCA_ORIG_CALL_APP	Orig. call app., Octet 3
( numeric value )	<i>range 0 through 255</i>

## 4.20 Other Call Reference IE (I#OTHER\_CALL\_REF)

Possible octet inclusions/exclusions:

OCTET\_3, OCTET\_4, OCTET\_5

->OCR_FLAG	Flag, Octet 3
#ORIG_SIDE	<i>origination side</i>
#DEST_SIDE	<i>destination side</i>
->OCR_VALUE	Other Call Ref., Octet 3, 4 & 5
( numeric value )	<i>range 0 through 524287</i>

## 4.21 Progress Indicator IE (I#PROGRESS\_IND)

Possible octet inclusions/exclusions:

OCTET\_3, OCTET\_4

->PI_CODING_STANDARD	Coding standard, Octet 3
#CCITT	<i>CCITT standardized in Q.931</i>
->PI_LOCATION	Location, Octet 3
#USER	<i>User</i>
#LOCAL_PRIVATE	<i>Private Network Serving Local User</i>
#LOCAL_PUBLIC	<i>Public Network Serving Local User</i>
#TRANSIT	<i>Transit Network</i>
#REMOTE_PUBLIC	<i>Public Network Serving Remote User</i>
#REMOTE_PRIVATE	<i>Remote Private Network</i>
#INTERNAT_NETWORK	<i>International Network</i>
#BEYOND_INTERWORK	<i>Network Beyond Interworking Point</i>
->PI_DESCRIPTION	Progress desc., Octet 4
#NOT_END_TO_END	<i>Call is not end-to-end ISDN</i>
#DEST_NON_ISDN	<i>Destination address is non-ISDN</i>
#ORIG_NON_ISDN	<i>Origination address is non-ISDN</i>
#RETURNED_TO_ISDN	<i>Call has returned to the ISDN</i>
#INBAND_INFO_AVAIL	<i>Inband treatment has been applied</i>

## 4.22 Restart Indicator IE (I#RESTART\_IND)

Possible octet inclusions/exclusions:

OCTET\_3

->RI_CLASS	Class, Octet 3
#INDICATED_BCHAN	<i>Indicated B-channel</i>
#SINGLE_INTERFACE	<i>Single Interface</i>

---

## 4.23 Selected Call Appearance IE (I#SEL\_CALL\_APP)

Possible octet inclusions/exclusions:

OCTET\_3

->SCA_SEL_CALL_APP ( numeric value )	Button Nr/Call App, Octet 3 <i>range 0 through 255</i>
---	---

---

## 4.24 Shift IE (I#SHIFT)

->SH_TYPE #LOCKING	Shift type <i>locking</i>
->SH_CODESET #CODESET5	New codeset ident. <i>IEs reserved for national use</i>
#CODESET6	<i>local service network specific IEs</i>
#CODESET7	<i>user specific IEs</i>

---

## 4.25 Signal IE (I#SIGNAL)

Possible octet inclusions/exclusions:

OCTET\_3

->SI_VALUE #DIAL_ON	Signal value, Octet 3 <i>Dial tone on</i>
#RING_BACK_ON	<i>Ringback (audible ring) tone on</i>
#INTERCEPT_ON	<i>Intercept tone on</i>
#CONGESTION_ON	<i>Network congestion tone on</i>
#BUSY_ON	<i>Busy tone on</i>
#CONFIRM_ON	<i>Confirm tone on</i>
#ANSWER_ON	<i>Answer tone on</i>
#CALL_WAITING_ON	<i>Call waiting tone on</i>
#OFF_HOOK_ON	<i>Off-hook warning tone on</i>
#CUSTOM_TONE	<i>Custom tone on</i>
#RECALL_DIAL_ON	<i>Recall Dial tone on</i>
#BUSY_VERIFY_ON	<i>Busy verify tone on</i>
#ERROR_ON	<i>Error tone on</i>
#STUTTER_ON	<i>Stutter Dial tone on</i>
#EXPENSIVE_ROUTE	<i>Expensive Routing tone on</i>
#TONES_OFF	<i>Tones off</i>
#ALERTING_ON_0	<i>Normal alerting</i>
#ALERTING_ON_1	<i>Distinctive alerting for inter term</i>
#ALERTING_ON_2	<i>Distinctive alerting for prior call</i>
#ALERTING_ON_3	<i>"Coded" or "Intercom" alerting</i>
#ALERTING_ON_4	<i>May be used for forwarded calls</i>
#ALERTING_ON_5	<i>"Party" or "tip" ringing equivalent</i>

---

#ALERTING_ON_6	<i>Attendant timed reminder alerting</i>
#ALERTING_ON_7	<i>Selective Distinctive Alerting Pat.</i>
#ALERTING_OFF	<i>Alerting off</i>
#RESERVED_SIGNAL	<i>Reserved</i>
#UNSPEC_TONE	<i>Unspecified Tone</i>

---

## 4.26 Switchhook IE (I#SWITCHHOOK)

Possible octet inclusions/exclusions:

OCTET\_3

->SW_VALUE	Switchhook Value, Octet 3
#ON_HOOK	<i>On-hook</i>
#OFF_HOOK	<i>Off-hook</i>

---

## 4.27 Terminal Capabilities IE (I#TERM\_CAPAB)

Possible octet inclusions/exclusions:

OCTET\_3

->TC_CODING_STANDARD	Coding standard, Octet 3
#CCITT	<i>CCITT standardized in Q.931</i>
->TC_DESCRIPTION	Capability Descr., Octet 3
#TYPE2_STIMULUS	<i>Type 2 stimulus</i>

---

## 4.28 User Code IE (I#USER\_CODE)

Possible octet inclusions/exclusions:

OCTET\_3, OCTET\_4

->UEC_TYPE	Type of User Code, Octet 3
#ANY	<i>Any</i>
#ACCOUNT_CODE	<i>Account Code</i>
#LOGIN_DIGITS	<i>Login Digits</i>
#SUB_INFO	<i>Subscriber Information</i>
#AUTH_CODE	<i>Authorization Code</i>
->UEC_VALUE	User Code value, Octet 4 *
( IA5 characters )	<i>max. length 32 octets</i>
