This microfiche card contains a grid of frames, each displaying technical data. The frames are arranged in approximately 10 rows and 5 columns. The data includes:

- Tables with multiple columns and rows of numerical values.
- Textual labels and headers, some in all caps.
- Diagrams and flowcharts, including a prominent one in the top right frame.
- Small charts and graphs.

The data appears to be related to the LSI11 microprocessor, likely providing performance metrics, timing diagrams, or configuration parameters. The text is small and difficult to read due to the resolution of the scan.

A small microfiche frame containing a table with several columns and rows of data. The text is very small and illegible.
