- ALL RIGHTS RESERVED -

BEFORE GETTING INTO THIS ISSUE, A FEW COMMENTS FROM THE FDITOR ARE NECESSARY. WE AT SCELBI ARE SOMEWHAT CONCERNED OVER THE SMALL PERCENTAGE OF READER'S WHO ARE CONTRIBUTING TO THE "SCELBI COMPUTER DIGEST." THIS PUBLICATION WAS LARGELY STARTED IN RESPONSE TO NUMEROUS INDIVIDUALS WHO REQUESTED A "USER FORUM" PUBLICATION. HOWEVER, DESPITE THE FACT THAT WE HAVE BEEN RECEIVING MANY FAVORABLE RESPONSES, AND MANY "PROMISES" OF CONTRIBUTIONS TO THE PUBLICATION, IT SEEMS THAT MOST OF THE SUBSCRIBERS ARE CONTENT TO READ RATHER THAN CONTRIBUTE. WE KNOW, FROM PERSONAL CONVERSATIONS AND LETTERS, THAT MANY OF OUR USER'S ARE DOING INTERESTING PROJECTS AND HAVE DEVELOPED GENERALLY USEFUL ROUTINES. BUT THEY APPARENTLY ARE SO INVOLVED THAT THEY FIND IT DIFFICULT TO FIND A FEW MOMENTS TO SHARE THEIR PROJECTS WITH OTHERS.

WHEN WE STARTED THIS PUBLICATION WE DID SO IN THE HOPES THAT WE WOULD BE PERFORMING A USEFUL SERVICE TO OUR USER'S BY PROVIDING AN IN-FORMATION EXCHANGE MEDIUM THAT MANY CUSTOMERS HAD BEEN CLAMORING FOR. HOWEVER, WE HAVE NOT FOUND THE USER INVOLUMENT TO BE ANY WHERE NEAR WHAT WE HAD ANTICIPATED. SHOULD THIS TREND CONTINUE, WE SHALL BE FORCED TO DISCONTINUE PUBLICATION OF THIS JOURNAL AT THE END OF THIS CALENDAR YEAR. THUS, WHETHER OR NOT PUBLICATION CONTINUES WILL BE UP TO YOU. THE FIELD OF COMPUTER'S FOR INDIVIDUALS IS STILL IN IT'S IN-FANCY. WE KNOW THAT ALMOST EVERY READER OUT THERE HAS SOMETHING TO SHARE WITH HISZHER FELLOW COMPUTER ENTHUSIASTS. THE AIM OF THIS PUB-LICATION HAS BEEN TO PROVIDE A MEDIUM FOR THAT EXCHANGE. PLEASE USE IT AS SUCH. THOSE LITTLE GENERAL OR SPECIAL PURPOSE ROUTINES THAT YOU HAVE STRUGGLED TO "CREATE" AND GFT OPERATIONAL MAY BE OF USE TO OTHERS. YOUR SHARING THEM CAN STOP THE PROCESS OF "RE-CREATING THE WHEEL" FOR EACH AND EVERY OTHER NEW-COMER. WHEN THAT PROCESS IS FLIMINATED. PEOPLE WILL HAVE MORE TIME TO CREATE NEW AND MORE POWERFUL PROGRAMS. THERE IS PLENTY OF ROOM IN THE FIFLD FOR ROUTINES, ARTICLES, AND CIRCUITS AT ALL LEVELS OF SOPHISTICATION. WHY NOT HELP THE FIELD ADVANCE AS YOU HELP YOURSELF?

ONE OF OUR MOST ACTIVE CONTRIBUTORS (AND ONE OF OUR EARLIEST CUSTOMERS!) IS DR. GEORGE L. HALLER (SUMMER ADDRESS: HOUND FARS CLUB, BLOWING ROCK, N.C. 28605). DR. HALLER CONTRIBUTED SEVERAL ITEMS TO THE LAST ISSUE AND HE HAS DONE IT AGAIN. FIRST, ON THE NEXT PAGE YOU WILL FIND A HANDY TABLE HE HAS PREPARED FOR CONVERTING OCTAL NUMBERS TO DOUBLE PRECISION NUMBERS. IT SHOULD BE VERY HELPFUL TO THOSE THAT ARE WORKING WITH MATHEMATICAL ROUTINES.

THEN. ON THE NEXT SEVERAL PAGES YOU WILL FIND HIS SOLUTION TO INTERFACING THE POPULAR "TELEVISION TYPEWRITER" (TUT) TO THE SCELBI-8H ALONG WITH SEVERAL ROUTINES TO DRIVE THE TUT. (THIS SHOULD PLEASE A NUMBER OF READERS WHO HAVE EXPRESSED AN INTEREST IN THIS "HOOK-UP.") THANK YOU ONCE AGAIN DR. HALLER. WE HOPE READERS WILL RECIPROCATE WITH SOME DATA/ROUTINES/CIRCUITS THAT YOU CAN USE!

A NEW CONTRIBUTOR THIS TIME IS MR. T. F. CALDWELL. (ADDRESS: PO BOX 116. BURGESS, VA 22432.) MR. CALDWELL JUST RECENTLY JOINED OUR USER'S GROUP AND HAS A SCELBI-8H TO WHICH HE WANTS TO ADD A TTY. TUT (NOTE THE TUT INTERFACE IN THIS ISSUE MR. CALDWELL!) AND MAG-TAPE UNIT. MR. CALDWELL CONSTRUCTED HIS COMPUTER FROM THE KIT VERSION AND HAS MADE UP A LITTLE "AUDIBLE" CIRCUIT TESTER TO HELP IN CHECKING OUT THE CHASSIS WIRING ETC.. THE CIRCUIT SURE LOOKS SIMPLE AND INEXPENSIVE AND PERHAPS SOME OF YOU WILL FIND IT AS USEFUL AS HE DOES. THE CIRCUIT IS SHOWN IMMEDIATELY FOLLOWING DR. HALLER'S TUT PROGRAM ON PAGE 5. THANK YOU ON BEHALF OF THE READERS MR. CALDWELL.

A TABLE OF DOUBLE PRECISION WORDS FOR AM 8 BIT MACHINE

If we wish to use numbers higher than 255 decimal in computer calculations using 8 bit words we find that we must concatenate two or more words which is called double or higher precision. Suppose we have the decimal number 2783, we would find that the binary equivalent is;

101011011111 which in octal is 5337.

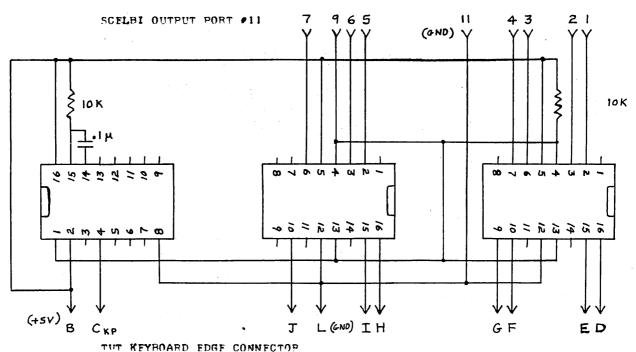

Now if we split this into two words of 8 bits each it would be

00001010 and 11011111

Note that the bit arrangement is the same but the octal is now 012 and 337. The first number is called the high order and the second number is called the low order of the double precision number.

Tables of decimal to octal numbers are found in many computer texts and following is the table of octal to double precision numbers.

George L. Haller

WI REIDUMNU EDGE CONNECTOR

"A" NEAREST RE TWIN LEAD

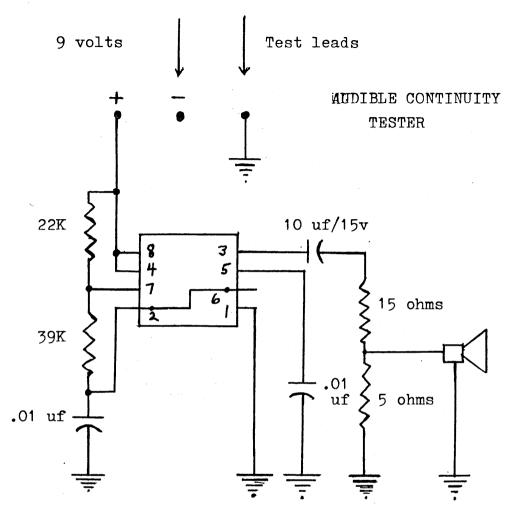

"L" NEAREST JI

10 UFD CAPACITOR (SHOWN AS C17 ON CURSOR DIAGRAM - WHICH IS C16 ON CURSOR BOARD) CHANGED TO 0.68 UFD.

IC is 555 Timer

Values shown give about 700 hz at 30% duty cycle The low-value resistors in the speaker circuit

could be replaced with a 20-ohm pot if volume control is desired.

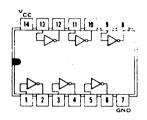

There is nine volts between the test leads, therefore the Tester should be used for continuity testing only.

MR. CALDWELL'S CIRCUIT CONTINUITY TESTER

IN THE APRIL, 1975 ISSUE OF "THE SCELBI COMPUTER DIGEST AND USER'S BULLETIN" AN INTEGRATED CIRCUIT TESTER WAS DESCRIBED. SEVERAL SAMPLE ROUTINES FOR DRIVING THE TESTER TO TEST COMMON TIL DEVICES SUCH AS THE 7400 AND 7402 DEVICES WERE PROVIDED IN THAT ARTICLE. IN THIS ISSUE, WE ARE PRESENTING SEVERAL MORE ROUTINES FOR OTHER TYPES OF TIL DEVICES.

THE FIRST ROUTINE TO BE PRESENTED HERE IS FOR THE TYPE 7404 TTL IN-VERTER PACKAGE. A DIAGRAM OF THE DEVICE AND IT'S PIN ASSIGNMENTS ARE SHOWN BELOW. THE DEVICE IS SIMPLY A PACKAGE OF SIX TTL INVERTERS. THE FOLLOWING ROUTINE WILL TEST THE DEVICE AS WELL AS IT'S "OPEN COLLECTOR" EQUIVALENTS SUCH AS THE 7416.

FOR THIS DEVICE, POWER SHOULD BE CONNECTED TO TEST POINTS 7 (COMMON) AND TP16 (+5 VOLTS). REMEMBER TO LEAVE SWITCHES 7 AND 16 OPEN FOR THE POWER CONNECTION POINTS. SWITCHES 1, 3, 5, 11, 13 AND 15 ON THE TESTER SHOULD BE "ON" (CLOSED) TO PROVIDE INPUTS TO THE DEVICE UNDER TEST. ALL OTHER SWITCHES SHOULD BE "OFF" (OPEN).

A VERY SIMILAR PROGRAM CAN BE USED TO TEST 7407 "BUFFERS" AND THEIR "OPEN COLLECTOR" EQUIVALENTS SUCH AS THE 7417. FOR THE FOLLOWING PROGRAM LEAVE THE SWITCHES AND POWER CONNECTIONS FXACTLY AS FOR THE PREVIOUS PROGRAM FOR 7404 DEVICES AND SUBSTITUTE THE FOLLOWING TESTER PROGRAM.

_ Q _

FND

WHEN USING THE 7410 TESTER PROGRAM SHOWN ON THE PREVIOUS PAGE POWER IS CONNECTED TO TP 7 (COMMON) AND TP16 (+5 VOLTS). SWITCHES 1, 2, 3, 4, 12, 13, 14 AND 15 ARE "ON" (CLOSED) TO PROVIDE INPUTS TO THE DEVICE UNDER TEST. ALL OTHER SWITCHES ARE "OPEN" (OFF).

THE FINAL TESTER PROGRAM TO BE ILLUSTRATED IN THIS ISSUE IS A MORE COMPLICATED ONE THAN THE ONES ILLUSTRATED FOR GATES, INVERTERS, AND BUFFERS. THIS PROGRAM IS FOR TESTING A "FLIP-FLOP" DEVICE. SUCH A DEVICE MUST BE "CLOCKED" ON ONE PIN WHILE A SIGNAL "INPUT" IS APPLIED TO ANOTHER, AND THEN A TEST MADE TO ASCERTAIN THAT THE "OUTPUT" FROM THE DEVICE IS PROPER AFTER THE "CLOCKING" HAS OCCURED. THE PROGRAM TO BE ILLUSTRATED IS FOR A TYPE 7474 DUAL FLIP-FLOP. A DIAGRAM ILLUSTRATING THE PIN ASSIGNMENTS FOR THE DEVICE IS SHOWN NEXT.

IN ADDITION TO THE "CLOCKING" MODE OF A STANDARD "FLIP-FLOP." THIS DEVICE ALSO HAS "PRESET" AND "CLEAR" SIGNALS THAT MAY BE USED TO CONDITION THE OUTPUT SIGNAL. THE FOLLOWING PROGRAM ALSO TESTS THAT THE "PRESET" AND "CLEAR" LINES OPERATE PROPERLY.

TO OPERATE THE FOLLOWING PROGRAM, POWER TO THE "DUT" IS PROVIDED AT TP 7 (COMMON) AND TP 16 (+5 VOLTS). SWITCHES 1, 2, 3, 4, 12, 13, 14 AND 15 ARE TURNED "ON." ALL OTHER SWITCHES SHOULD BE "OFF," THE READER MAY NOTICE THAT THE ROUTINE UTILIZES A NUMBER OF SUBROUTINES TO REDUCE THE TOTAL AMOUNT OF MEMORY SPACE USED BY THE PROGRAM.

SCELBI SPECIAL FEATURE

AN IMPROVED TAPE READ/WRITE PROGRAM FOR THE SCELEI TAPE INTERFACE

IT WAS RECENTLY DECIDED TO DEVELOP AN IMPROVED GENERAL PURPOSE TAPE READ AND WRITE PROGRAM FOR THE SCELBI TAPE INTERFACE. THE OBJECTIVE WAS TO DEVISE A PROGRAM THAT WOULD HAVE GENERAL PURPOSE APPLICATION INSTEAD OF USING VARIOUS VERSIONS FOR DIFFERENT TYPES OF PROGRAMS AS HAS BEEN THE CASE IN THE PAST. ONE GOAL OF THE DEVELOPMENT EFFORT WAS TO HAVE THE ENTIRE PROGRAM FIT ON A SINGLE 1702 TYPE PROM SO THAT IT COULD SERVE AS A GENERAL PURPOSE UTILITY ROUTINE FOR A WIDE VARIETY OF PROGRAMS. PLACING THE PROGRAM ON A PROM, AS THE READER KNOWS, GIVES A SYSTEM INSTANT CAPABILITY AS SOON AS THE COMPUTER IS POWERED UP. THE PROGRAM DESCRIBED HERE HAS BEEN DESIGNATED AS THE NEW STANDARD TAPE READ/WRITE PROGRAM FOR THE SCELBI TAPE INTERFACE. IT IS BEING PRESENTED FOR THE BENEFIT OF ALL PREVIOUS SCELBI TAPE INTERFACE OWNERS.

THERE ARE NUMEROUS NEW FEATURES IN THE TAPE READ/WRITE PROGRAM AS WILL BE EXPLAINED SHORTLY. FIRST, HOWEVER, A REVIEW OF THE GENERAL OPERATION OF PREVIOUS SCELBI TAPE PROGRAMS IS IN ORDER.

AS SCELBI TAPE INTERFACE OWNERS KNOW, THE SCELBI TAPE INTERFACE, WHEN IN THE WRITE MODE, ACCEPTS FOUR "DATA" BITS FROM THE COMPUTER AT A TIME. THE INTERFACE THEN ADDS A "START" BIT AND SENDS THE START BIT AND FOUR DATA BITS AS ONE SERIAL GROUP. TO SEND A COMPLETE EIGHT BIT WORD THUS REQUIRES TWO WRITE OPERATIONS OF THE INTERFACE. FOR EXAMPLE, FIRST THE FOUR MOST SIGNIFICANT BITS OF A WORD ARE SENT TO THE INTERFACE, THEN THE FOUR LEAST SIGNIFICANT BITS.

IN THE RECEIVE MODE, THE TAPE INTERFACE RECEIVES DATA ASYNCHRONOUS-LY. AS THE TAPE IS READ BACK, THE INTERFACE SEARCHES FOR A "START" BIT AND WHEN ONE IS DETECTED, A SOFTWARE ROUTINE IS UTILIZED TO SAMPLE THE NEXT FOUR UNITS OF TIME FOR THE FOUR DATA BITS IN A GROUP. THIS SEQUEN-CE IS REPEATED TWICE FOR EACH FULL EIGHT BIT WORD THAT IS RECEIVED TO BE PLACED IN THE COMPUTER'S MEMORY.

THE NEW TAPE READ/WRITE PROGRAM DOES NOT, OF COURSE, ALTER THE BASIC OPERATION OF THE TAPE INTERFACE AS IT HAS BEEN DESCRIBED IN THE PREVIOUS TWO PARAGRAPHS. HOWEVER, THE GENERAL "FORMAT" OF HOW DATA IS SENT TO AND RECEIVED FROM THE TAPE UNIT HAS BEEN ALTERED.

IN PREVIOUS TAPE READ/WRITE VERSIONS, DATA TO BE TRANSMITTED TO THE TAPE UNIT WAS FORMATTED IN SEVERAL WAYS DEPENDING ON THE TYPE OF PROGRAM BEING USED. FOR INSTANCE, IN THE BASIC TAPE READ/WRITE VERSION, WHEN A PERSON WANTED TO WRITE DATA TO THE TAPE UNIT, THE OPERATOR SET UP CPU REGISTERS "H&L" TO THE STARTING ADDRESS OF THE DATA BLOCK IN MEMORY, AND CPU REGISTER "E" TO A "WORD COUNT" WHICH INDICATED THE NUMBER OF CONSECUTIVE WORDS THAT WERE TO BE WRITTEN. THE BASIC PROGRAM LIMITED EACH WRITE OPERATION TO ONE PARTICULAR PAGE IN MEMORY. THE PROGRAM WOULD THEN SEND THE DATA TO THE TAPE UNIT BY SPLITTING EACH WORD IN HALF TO BE COMPATIBLE WITH THE TAPE INTERFACE. AS EACH MEMORY WORD WAS PROCESSED, THE TAPE WRITE PROGRAM COMPILED A "CHECK SUM" BY ADDING UP THE VALUE OF ALL THE "WORDS" SENT AND AT THE END OF THE PROGRAM IT WOULD SEND THE TWO'S COMPLEMENT OF THAT CALCULATED VALUE AS THE LAST "WORD" OF THE STRING OF DATA. IN THE READ MODE, THE OPERATOR WOULD AGAIN SET

CPU REGISTERS "H&L" TO THE STARTING ADDRESS WHERE DATA WAS TO BE LOADED, AND PLACE THE WORD COUNT IN REGISTER "E." THE READ PROGRAM WOULD THEN READ BACK THE DATA, COMBINING THE GROUPS OF FOUR BITS INTO EIGHT BIT GROUPS FOR STORAGE IN MEMORY WORDS. IT ALSO CALCULATED A "CHECK SUM" AS DATA WAS READ AND AT THE END OF A STRING OF DATA CHECKED TO SEE IF THE DATA HAD BEEN READ CORRECTLY BY ADDING THE TWO'S COMPLEMENT VALUE RECEIVED AS THE LAST "WORD" TO THE VALUE IT CALCULATED AS DATA WAS READ AND CHECKING TO SEE THAT THE SUM WAS ZERO.

IN THE "BLOCK" FORMAT TAPE READ WRITE PROGRAM, THE USER FIRST SET UP THE STARTING PAGE IN REGISTER "H" AND THE NUMBER OF PAGES TO BE PROCESSED IN CPU REGISTER "E." THIS PROGRAM ALLOWED MULTIPLE PAGES OF DATA TO BE PROCESSED AT ONE TIME AND ALSO USED A CHECK SUM TECHNIQUE BUT IT HAD A DRAW BACK OF REQUIRING FULL PAGES TO BE WRITTEN AT A TIME.

WHEN USING THE TAPE INTERFACE TO RECORD THE OBJECT CODE FOR PROGRAMS PRODUCED BY THE ORIGINAL SCELBI ASSEMBLER PROGRAMS, A SIMILAR APPROACH THAT UTILIZED A "WORD COUNT" AND CHECK SUM WAS UTILIZED, BUT NOW THE TAPE WAS AUTOMATICALLY FORMATTED SO THAT THE FIRST TWO WORDS IN A "FILE" ON A TAPE WERE TAKEN TO BE AN "ADDRESS" AND THE THIRD WORD WAS A "WORD COUNT." THE TECHNIQUE ALLOWED A LARGE PROGRAM, SCATTERED AT MANY LOCATIONS IN MEMORY TO BE AUTOMATICALLY CREATED AND READ BACK IN ONE OPERATION, BUT THE COMBINED READ AND WRITE PROGRAMS WERE RATHER LARGE.

OTHER TYPES OF PROGRAMS USED OTHER KINDS OF TAPE FORMATTING TO ACCOMPLISH SPECIFIC OBJECTIVES. ESSENTIALLY, EACH TYPE OF PROGRAM UTILIZING THE TAPE INTERFACE HAD A DIFFERENT TYPE OF FORMAT RESULTING IN A PROLIFERATION OF TAPE READ/WRITE PROGRAMS.

THE NEW SCELBI STANDARD TAPE READ/WRITE PROGRAM ESTABLISHES A FORMAT THAT CAN BE USED BY A WIDE VARIETY OF PROGRAMS WITH WIDELY RANGING FUNCTIONS. THE KEY TO THE PROGRAM'S SUCCESS HAS BEEN THE DEVELOPMENT OF A FORMAT FOR PLACING DATA ON THE TAPE WHICH IS EXPLAINED BELOW.

A BYTE OF DATA IN THE COMPUTER, THAT IS TO BE STORED ON THE TAPE UNIT CAN BE CONSIDERED AS CONSISTING OF EIGHT BINARY BITS ARRANGED AND SYMBOLIZED FROM MOST SIGNIFICANT TO LEAST SIGNIFICANT BITS AS SHOWN:

7 6 5 4 3 2 1 0

IN THE NEW TAPE FORMAT, EACH GROUP OF EIGHT BITS FROM THE COMPUTER IS SPLIT INTO TWO GROUPS OF FOUR BITS (A MOST SIGNIFICANT HALF AND A LEAST SIGNIFICANT HALF). THEN A NEW WORD OF EIGHT BITS IS FORMED BY ADDING FOUR BITS OF INFORMATION TO THE RIGHT OF EACH "HALF" OF THE ORIGINAL EIGHT BIT COMPUTER WORD. THESE FOUR BITS OF INFORMATION ARE USED TO DIRECT THE OPERATION OF THE TAPE UNIT AS WILL BE EXPLAINED SHORTLY. FOR NOW, ONE CAN VIEW THE ORIGINAL FORMAT OF AN EIGHT BIT WORD BEING SPLIT IN HALF AND COUPLED TO FOUR "INFORMATION" BITS SO THAT THE ORIGINAL DATA WOULD APPEAR AS:

P H L T 7 6 5 4

P - - 3 2 1 0

THUS. WHAT WAS ORIGINALLY AN EIGHT BIT DATA WORD IS TRANSFORMED INTO TWO EIGHT BIT WORDS. EACH NEW EIGHT BIT WORD CONTAINS FOUR BITS OF THE ORIGINAL DATA AND FOUR NEW "STATUS" BITS ARRANGED AS SHOWN.

THE "STATUS" BITS SHOWN IN THE PPEVIOUS ILLUSTRATION CARRY THE FOLLOWING INFORMATION:

THE "P" POSITION IS USED AS A PARITY BIT. THIS BIT IS SET BY THE WRITE PROGRAM SO THAT A GROUP OF EIGHT BITS IS ALWAYS "EVEN PARITY." THAT IS, THERE WILL BE AN EVEN NUMBER (0, 2, 4, 6 OR 8) BITS IN THE LOGIC "ONE" STATE.

THE "H" BIT IS SET TO A ONE IF THE "DATA BITS" ARE TO CONTAIN A. H I G H ADDRESS (PAGE).

THE "L" BIT IS SET TO A ONE IF THE "DATA BITS" ARE TO CONTAIN A L O W ADDRESS.

THE "T" BIT IS SET TO A ONE TO SIGNIFY "TRAILER" CODE.
TRAILER CODE SIGNIFIES THE END OF A TAPE "FILE" AND
THE "DATA BITS" IN THE GROUP WILL BE IGNORED.

IF NEITHER THE "H," "L," OR "T" BIT IS SET TO A ONE THE "DATA BITS" ARE CONSIDERED TO BE INFORMATION TO BE LOADED INTO MEMORY.

USING THE ABOVE FORMAT, A TYPICAL WRITE OPERATION WOULD RESULT IN INFORMATION BEING WRITTEN ON THE TAPE AS FOLLOWS:

X	H	0	0	7	6	5	4	DATA BITS = PAGE ADDRESS
x	0	0	0	3	2	1	0	DATA DITTO - TAGE ADDITES
x	0	L	0	7	6	5	4	DATA BITS = LOW ADDRESS
×	0	0	0	3	2	. 1	0	DAIR DITS - NOE REDICESS
X	0	0	0	7	6	5	4	DATA BITS = DATA
x	0	0	0	3	2	1	0	<i>Difficulty</i> = 2

DATA

X 0 0 T 7 6 5 4

DATA BITS = DON'T CARE

X 0 0 0 3 2 1 0

THIS FORMAT OFFERS SEVERAL NICE FEATURES. FOR ONE, IT ALLOWS THE WRITING OF TAPES THAT WHEN READ BACK IN WILL AUTOMATICALLY READ DATA INTO THE CORRECT MEMORY ADDRESSES WITHOUT ANY "INITIALIZATION" PROCEDURES. FOR ANOTHER, ERROR CHECKING IS ACCOMPLISHED ON A BYTE-BY-BYTE BASIS. THUS, IF AN ERROR IS DETECTED, THE PROGRAM CAN BE STOPPED IM-

MEDIATELY INSTEAD OF HAVING TO WAIT FOR AN ENTIRE PROGRAM TO BE READ IN ONLY TO FIND BY A CHECK SUM TECHNIQUE THAT AN ERROR OCCURED. THIRD, BY DEVELOPING THE OVER ALL PROGRAM AS A SERIES OF SUBROUTINES, THE PROGRAM ALLOWS CONSIDERABLE FLEXIBILITY AS WILL BE ILLUSTRATED.

FOR INSTANCE, BY REFERRING TO THE PROGRAM LISTING WHICH IS PRESENTED AT THE END OF THIS DISCUSSION, (THE LISTING SHOWS THE PROGRAM AS IT WOULD APPEAR RESIDING ON PAGE 17), ONE CAN SEE A GROUP OF SUBROUTINES IN THE WRITE SECTION.

THE FIRST SUCH SUBROUTINE, LABELED "WLEAD," SIMPLY STARTS THE TAPE RECORDER'S MOTOR AND PROVIDES FOR ABOUT A THREE SECOND DELAY BEFORE THE ROUTINE IS EXITED. THIS SUBROUTINE WOULD BE CALLED WHEN ONE WANTED TO START A NEW TAPE "FILE." AS SCELBI TAPE INTERFACE OWNERS KNOW, WHEN THE TAPE UNIT IS NOT TRANSMITTING DATA, IT WILL WRITE ALL "ZEROS" SO USING THIS SUBROUTINE WOULD EFFECTIVELY CAUSE ABOUT THREE SECONDS OF "LEADER" (ALL ZEROS) CODE TO BE WRITTEN ON THE TAPE.

THE NEXT SUBROUTINE STARTING AT LOCATION 010 AND LABELED "WADDR" IS A SUBROUTINE THAT WILL WRITE THE CONTENTS OF THE "H" AND "L" REGISTERS IN THE CPU ONTO THE TAPE IN THE DESCRIBED FORMAT. THE "H" STATUS BIT WILL BE SET WHEN THE "PAGE" ADDRESS IS WRITTEN, AND THE "L" STATUS BIT WILL BE SET WHEN THE "LOW" ADDRESS IS WRITTEN. NOTE THAT ONE ALSO HAS THE OPTION OF ENTERING THE SUBROUTINE AT LOCATION 016 LABELED AS "WADRL" IN THE EVENT ONE ONLY WANTS TO WRITE A NEW "LOW" ADDRESS BYTE! THUS, TO SEND ADDRESSING INFORMATION OUT TO THE TAPE UNIT ONE MERELY HAS THE CALLING ROUTINE SET UP "H & L" TO THE DESIRED ADDRESS (OR JUST "L" IF THAT OPTION IS DESIRED) AND CALLS THE "WADDR" SUBROUTINE.

THE NEXT SUBROUTINE SHOWN AT LOCATION 024 AND LABELED "WDATA" WILL CAUSE THE CONTENTS OF CPU REGISTER "C" TO BE WRITTEN ON THE TAPE UNIT AS A "DATA" WORD. THUS, TO WRITE A STRING OF LOCATIONS IN MEMORY AS DATA ON THE TAPE UNIT, ONE JUST LOADS SUCCESSIVE WORDS INTO REGISTER "C" AND CALLS THE "WDATA" SUBROUTINE.

FOLLOWING THE "WDATA" SUBROUTINE AT LOCATION 036 IS A SUBROUTINE LABELED "WTRAL." CALLING THIS SUBROUTINE WILL CAUSE THE PROGRAM TO WRITE AN "END OF FILE" OR "TRAILER CODE" BYTE TO THE TAPE UNIT AND STOP THE TAPE UNIT'S MOTOR.

TO WRITE A CONTINUOUS BLOCK OF DATA FROM ONE ADDRESS IN MEMORY TO ANOTHER HIGHER ORDERED ADDRESS VALUE, ONE CAN USE THE SUBROUTINE LABELED "WRITE" SHOWN AT LOCATION 147. PRIOR TO CALLING THE "WRITE" SUBROUTINE ONE HAS THE CALLING PROGRAM SET "H & L" TO THE STARTING ADDRESS OF THE BLOCK OF DATA TO BE WRITTEN, AND "D & E" SET TO THE ENDING ADDRESS. THE "WRITE" ROUTINE WILL THEN CALL ON THE PREVIOUSLY DESCRIBED ROUTINES IN THE CORRECT ORDER TO WRITE A VARIABLE LENGTH "FILE."

OF COURSE, THERE ARE TIMES WHEN ONE DOES NOT WANT TO WRITE JUST ONE CONTINUOUS BLOCK OF DATA, BUT MAY INSTEAD DESIRE TO WRITE A SERIES OF VARIABLE LENGTH BLOCKS RESIDING IN DIFFERENT MEMORY LOCATIONS, WITHOUT STOPPING THE TAPE UNIT. A TYPICAL EXAMPLE OF WHEN SUCH CAPABILITY IS DESIRED IS WHEN ONE IS USING AN ASSEMBLER TO PRODUCE OBJECT CODE AT VARIOUS LOCATIONS IN MEMORY. IN SUCH A CASE, ONE CAN CALL ON THE VARIOUS DESCRIBED SUBROUTINES IN THE ORDER DESIRED. FOR INSTANCE, WHENEVER AN "ORG" STATEMENT WAS PROCESSED BY THE ASSEMBLER, ONE COULD CALL THE "WADDR" TO ALTER THE ADDRESSING INFORMATION. ONE COULD ALTERNATELY WRITE NEW ADDRESSES FOLLOWED BY BLOCKS OF DATA FOR AS LONG AS NECESSARY FOR THE ASSEMBLY PROCESS AND THEN TERMINATE THE FILE BY CALLING THE "WTRAL" SUBROUTINE. THERE ARE OTHER TYPES OF PROGRAMS WHERE SUCH FLEXIBILITY IS DESIRED.

OF COURSE, IF ONE HAS CRITICAL APPLICATIONS WHERE ONE DOES NOT FEEL SECURE BY JUST USING "PARITY" ERROR CHECKING, ONE CAN HAVE A CALLING ROUTINE GENERATE A "CHECK SUM" OR OTHER ADDITIONAL ERROR CHECKING PROCEDURE AND WRITE THAT INFORMATION AS "DATA" WHEN DESIRED. AN ADDITIONAL ROUTINE WOULD THEN PROCESS THAT INFORMATION AS DESIRED ON THE RECEIVE SIDE.

FINALLY, ONE CAN FIND AT LOCATION 374 A ROUTINE CALLED "BWRIT."
THIS ROUTINE WAS INCLUDED FOR "PROM" VERSIONS SO THAT A USER COULD MANUALLY SET UP "H & L" AND "D & E" AND WRITE A "FILE" AS A "STAND ALONE"
FUNCTION.

OPERATION OF THE RECEIVE SIDE IS SIMPLICITY ITSELF. ONE SIMPLY CALLS THE SUBROUTINE "READ" AT LOCATION 210. OPERATION FROM THERE IS AUTOMATIC. THE READ PROGRAM WILL PROCESS THE INFORMATION ON THE TAPE. SETTING UP "H" AND "L" AS DIRECTED BY THE "STATUS" CODES IT RECEIVES AND LOADING DATA INTO MEMORY LOCATIONS UNTIL A PARITY ERROR IS DETECTED OR A "TRAILER" CODE IS DETECTED. UPON EXIT FROM THE "READ" ROUTINE CPU REGISTER "C" WILL CONTAIN ALL ZEROS IF NO ERRORS WERE DETECTED, OR ALL ONES IF A PARITY ERROR OCCURED. ONE CAN THUS HAVE THE CALLING ROUTINE CHECK TO SEE IF THE FILE READ WAS "VALID." THE READ ROUTINE ALSO PRO-VIDES FOR STARTING AND STOPPING THE TAPE UNIT'S MOTOR. NATURALLY, BE-FORE USING THE READ ROUTINE ONE WOULD MANUALLY SET UP THE TAPE UNIT SO THAT IT WAS ON THE "LEADER" PORTION AT THE BEGINNING OF A "FILE." THE USER MAY NOTE THAT THE READ PROGRAM INTRODUCES ABOUT A HALF SECOND DE-LAY FROM THE TIME IT DIRECTS THE MOTOR TO START SO THAT THE TAPE UNIT WILL BE UP TO SPEED BEFORE LOOKING FOR INFORMATION ON THE TAPE. THIS TECHNIQUE ALSO ENABLES THE TAPE UNIT TO SKIP OVER ANY "GARBAGE" THAT CAN EXIST BETWEEN THE END OF ONE FILE (WHEN THE TAPE UNIT IS STOPPED) AND THE BEGINNING OF THE NEXT FILE (WHEN THE TAPE UNIT IS FIRST STARTED) SO THAT THE PROGRAM CAN BE USED TO PROCESS A WHOLE SERIES OF CONSECUTIVELY WRITTEN "FILES." (A FILE IS DEFINED HERE AS THE STARTING AND STOPPING OF TAPE MOTION. A FILE ITSELF MAY HAVE MULTIPLE "BLOCKS" OF DATA AT VARIOUS ADDRESSES USING THE DESCRIBED TAPE FORMAT!)

FINALLY, JUST ENOUGH ROOM WAS PROVIDED IN THE PROM VERSION TO BE ABLE TO INCLUDE THE ROUTINE AT LOCATION 370 LABELED "BREAD." THIS ROUTINE MAY BE USED WHEN A UNIT IS INITIALLY POWERED UP TO ALLOW AN OPERATOR TO READ IN TAPES. WHEN THIS ROUTINE IS USED, THE OPERATOR SHOULD USE MANUAL METHODS TO CHECK THE CONTENTS OF CPU REGISTER "C" WHEN THE TAPE UNIT STOPS TO SEE THAT IT CONTAINS THE "VALID" ALL ZEROS INDICATOR.

IN ADDITION TO THE OVER ALL IMPROVEMENTS THIS NEW FORMAT YIELDS. IN DEVELOPING THE ROUTINES IT WAS FOUND THAT A SUBSTANTUAL IMPROVEMENT IN THE READ ROUTINE ALLOWS INCREASED VARIATIONS OF THE TAPE UNITS SPEED TO STILL BE RECEIVED PROPERLY AND THE PROGRAM MAY PROVIDE SUFFICIENT MARGIN FOR USER'S TO EXCHANGE TAPES MADE ON DIFFERENT MACHINES WITHOUT HAVING TO ALTER THE TIMING CONSTANTS OF THE PROGRAM.

IN ANY EVENT, WE AT SCELBI HAVE FOUND THE OVER ALL PACKAGE TO BE MOST SATISFACTORY AND THINK OUR PREVIOUS TAPE INTERFACE OWNERS WILL FIND IT A CONSIDERABLE IMPROVEMENT.

SCELBI TAPE INTERFACE UNIT OWNERS WHO USE THE TAPE MOTOR CON-* TROL FEATURE WILL FIND THAT REMOVING THE MOTOR CONTROL PLUG FROM * THE TAPE UNIT JACK CAN CAUSE THE MOTOR CONTROL RELAY TO CHANGE * STATES. THE REASON THIS CAN OCCUR IS BECAUSE WHEN THE PLUG IS RE-MOVED OR INSERTED, TRANSIENT SIGNALS CAN OCCUR THAT WILL TRIGGER THE RELAY. THE SOLUTION TO THE PROBLEM IS A SIMPLE ONE. SIMPLY CONNECT A SEPARATE PERMANENT GROUND WIRE BETWEEN THE TAPE UNIT AND THE TAPE INTERFACE. THIS WIRE CAN BE ATTACHED AT THE SHIELD (GROUND) OF EITHER THE CABLE FOR THE TAPE INTERFACE * READ PLUG OR WRITE PLUG. THE OTHER END OF THE WIRE SHOULD BE AT-* TACHED TO A SCREW THAT IS CONNECTED TO THE TAPE UNIT'S SIGNAL GROUND, OR TO THE COMMON SIDE OF THE MOTOR CONTROL, EARPHONE, OR * RECORDING JACK. A GOOD MEANS OF SECURING THE WIRE TO THE JACK IS * TO INSERT A LOCKING OR FLAT WASHER UNDER THE NUT THAT HOLDS THE * JACK IN PLACE AND SOLDER THE GROUND WIRE TO THE WASHER. ************************

020 000

SOME NEWCOMERS TO THE FIFLD OF COMPUTERS HAVE WRITTEN TO ASK ABOUT DEFINITIONS OF VARIOUS TERMS THEY HAVE HEARD ABOUT. ONE OF THE MOST COMMON QUESTIONS REFERS TO THE DEFINITION OF A "BOOTSTRAP LOADER PROGRAM." THE FOLLOWING IS A BRIFE DISCUSSION ON THE SUBJECT.

THE TERM "BOOTSTPAP LOADER" IS SOMEWHAT NEBULOUS. IT CAN REFER TO A VAPIETY OF PROGRAMS, BUT THE COMMON DENOMINATOR AMONG THEM RELATES TO THE FOLLOWING CONCEPT. A "BOOTSTRAP LOADER" IS LITEPALLY A PROGRAM THAT FNABLES A COMPUTED TO USE ITSELF TO LOAD IN A MORE POWERFUL PROGRAM. THE VERNACULAR ACTUALLY COMES FROM THE CONCEPT OF "LIFTING ONESELF UP BY ONE'S OWN BOOTSTPAPS!"

AS MOST READERS KNOW, WHEN A COMPUTER IS INITIALLY POWERED UP IT'S MEMORY CIRCUITS WILL BE IN A STATE OF DISARRAY. THE BINARY BITS THAT MAKE UP FACH WORD IN MEMORY WILL BE IN ESSENTIALLY RANDOM STATES OF EITHER A LOGIC "I" OR "0." IF A USER WEPE TO PUT THE COMPUTER IN THE "RUN" MODE IMMEDIATELY FOLLOWING POWER TURN-ON, IT IS HIGHLY UNLIKELY THAT THE COMPUTER WOULD DO ANYTHING USEFUL. THE RANDOM STATES OF THE WORDS IN MEMORY WOULD BE INTERPRETED AS COMPLETELY RANDOM INSTRUCTIONS IF ANYTHING AT ALL.

THUS, THE FIRST THING THAT MUST BE ACCOMPLISHED WHEN A COMPUTER IS INITIALLY POWERED UP IS TO PLACE SOME KIND OF PROGRAM INTO IT'S MEMORY. FOR THE SMALL COMPUTER OWNER, THIS PROCESS' IS USUALLY ACCOMPLISHED BY UTILIZING MANUAL METHODS TO "ADDRESS" INDIVIDUAL WORDS IN MEMORY AND PLACE SOME DESIRED "INSTRUCTIONS" INTO THOSE WORDS. IN OTHER WORDS, TO MANUALLY LOAD IN A "PROGRAM."

NOW, MOST PROGRAMS THAT NEED TO BE LOADED INTO MEMORY IN ORDER TO HAVE THE COMPUTER PERFORM SOMETHING USEFUL ARE LIKELY TO BE OF CONSIDERABLE LENGTH. THAT IS, THEY MAY CONSIST OF SEVERAL HUNDRED TO SEVERAL THOUSAND INSTRUCTIONS. IT WOULD BE A PATHER TEDIOUS PROCESS IF EACH TIME ONE TUPNED ON A COMPUTER, THEY HAD TO MANUALLY "TOGGLE IN," SAY BY CONSOLE SWITCHES, SEVERAL THOUSAND INSTRUCTIONS INTO THE COMPUTER'S MEMORY. (SEVERAL HUNDRED INSTRUCTIONS IS TEDIOUS FNOUGH!)

NATURALLY, THERE IS A BETTER WAY. MOST COMPUTERS ARE CONNECTED TO I/O (INPUT/OUTPUT) DEVICES WHICH CAN BE USED TO AUTOMATE THE PROCESS OF "LOADING" PROGRAMS INTO MEMORY - AS WELL AS SERVING AS A COMMUNICATIONS MEDIUM BETWEEN THE OPERATOR AND A COMPUTER PROGRAM. HOWEVER, THOSE "I/O" DEVICES THEMSELVES REQUIRE SOME SORT OF "PROGRAM" IN ORDER TO EFFECTIVELY COMMUNICATE WITH THE COMPUTER. HOW COMPLEX A PROGRAM - AND THUS HOW LENGTHY, GENERALLY DEPENDS ON WHAT KINDS OF FUNCTIONS ARE GOING TO BE PERFORMED.

A "BOOTSTRAP PROGRAM," IN GENERAL TERMS IS A "MINIMUM LENGTH" PROGRAM THAT CAN BE PLACED IN MEMORY IN ORDER TO ALLOW AN INPUT DEVICE TO AUTOMATICALLY LOAD A MORE COMPLEX PROGRAM. OFTEN, IN ORDER TO SATISFY THE NEED FOR A MINIMUM LENGTH PROGRAM, THE BOOTSTRAP LOADER WILL NOT FULLY UTILIZE THE CAPABILITY OF THE INPUT DEVICE. FOR EXAMPLE, THE INPUT DEVICE MIGHT BE CAPABLE OF SENDING SAY EIGHT BITS OF INFORMATION IN ONE OPERATION TO THE COMPUTER. HOWEVER, IT MIGHT REQUIRE MORE INSTRUCTIONS IN A PROGRAM FOR THE COMPUTER TO ACCEPT THE FIGHT BITS IN ONE OPERATION THAN IF JUST ONE BIT WAS ACCEPTED PER OPERATION OF THE INPUT DEVICE. THE TRADE-OFF MIGHT BE FOR INSTANCE, THE OVER-ALL SPEED AT WHICH THE INPUT DEVICE COULD OPERATE. IT WOULD BE MUCH FASTER IF IT USED THE MODE WHERE IT SENT FIGHT BITS IN ONE OPERATION INSTEAD OF JUST ONE BIT. ANOTHER AREA THAT IS OFTEN SACPIFICED IN USING A "BOOTSTRAP"

LOADER" PROGRAM IS OFTEN BELATED TO DUFFUE IN MEMORY DATA WILL HE LOADED.
FOR INSTANCE, AN INDUT DEVICE, BY ONE SCHEME OR ANOTHER, MAY BE ABLE TO
LOAD VIRTUALLY ANY "ADDRESS" IN MEMORY BY, FOR INSTANCE, SENDING A SPECIFIC "CODE" THAT MOULD CAUSE THE COMPUTER TO ALTER THE ADDRESS AT WHICH
IT WAS DEPOSITING DATA FROM THE DEVICE. HOWEVER, ADDING THIS CAPABILITY
OFTEN REQUIRES A MORE SOPHISTICATED "LOADER PROGRAM." A "BOOTSTRAP
LOADER" MIGHT FLIMINATE THIS FEATURE TO SHORTEN THE PROGRAM BY ASSUMING
THAT WHATEVER IS LOADED WILL BE DEPOSITED IN A SPECIFIC APEA IN MEMORY
(THAT MIGHT BE DETERMINED BY THE OPERATOR'S INITIALIZING COMMANDS).

THUS. A "BOOTSTRAP LOADER" PROGRAM IS OFTEN USED TO ENABLE THE COMPUTER TO "LIFT ITSELF UP" FROM A VERY SMALL PROGRAM TO A MUCH LARGER PROGRAM. A TYPICAL SEQUENCE OF FUENTS FOR GETTING A COMPUTER OPERATIONAL AFTER POWER TURN-ON MIGHT BE AS FOLLOWS:

- 1.) POWER IS INITIALLY TURNED ON. MEMORY IS IN RANDOM STATE AND COMPUTER IS ESSENTIALLY "FUNCTION-LESS."
- 2.) OPFRATOR USES MANUAL CONSOLE SWITCHES TO LOAD IN A "MINIMAL LENGTH" BOOTSTRAP LOADER PROGRAM. THIS BOOTSTRAP LOADER PROGRAM WILL PROVIDE SOME SORT OF "LOW-LEVEL" INEFFICIENT INPUT CAPABILITY FROM AN INPUT DEVICE TO SPEED UP THE PROGRAM LOADING PROCESS OVER THAT ALLOWED BY MANUAL MEANS.
- 3.) THE "BOOTSTRAP LOADER PROGRAM" IS THEN USED TO ALLOW THE IN-PUT DEVICE TO LOAD IN, FOR INSTANCE, A MUCH MORE EFFICIENT "GENERAL PURPOSE" LOADER PROGRAM. THIS GENERAL LOADER PRO-GRAM IS TYPICALLY MUCH FASTER AND HAS MORE CAPABILITY.
- 4.) THE "GENERAL PURPOSE" LOADER PROGRAM IS THEN USED TO LOAD IN A DESIRED OPERATING PROGRAM SUCH AS, FOR INSTANCE, AN EDITOR, ASSEMBLER, CALCULATOR OR SPECIAL PURPOSE PROGRAM.

SO. ACTUALLY. TO SUMMARIZE. THE PROCESS IS REALLY ONE OF THE COMPUTER "HELPING ITSELF." A MINIMAL LENGTH PROGRAM IS USED TO LOAD IN A LONGER MORE SOPHISTICATED "LOADER" AND THAT IN TURN IS USED TO LOAD IN A LARGER GENERAL PURPOSE PROGRAM. THE COMPUTER USES ITS OWN "POWER" TO BUILD UP IT'S TOTAL CAPABILITY!

A "BOOTSTRAP LOADER" PROGRAM CAN TAKE ON MANY FORMS AND BE OF VARIABLE LENGTH DEPENDING ON THE TYPE OF INPUT DEVICE IT IS INTENDED TO FUNCTION WITH. NATURALLY, THE SHORTER THE PROGRAM THE BETTER FROM THE OPERATOR'S STAND-POINT OF HAVING TO MANUALLY LOAD IN THE BOOTSTRAP PROGRAM. FOR 8008 BASED MACHINES, IT IS GENERALLY DESIRABLE TO LIMIT THE SIZE OF A BOOTSTRAP LOADER TO UNDER, SAY, 100 OCTAL (64 DECIMAL) INSTRUCTIONS, AS THIS WILL KEEP THE MANUAL LOADING PROCESS UNDER ABOUT TEN MINUTES.

OF COURSE, FOR A PERSON WHO USES A COMPUTER ON A DAILY BASIS, FUFN TAKING FIVE OR 10 MINUTES FACH DAY TO MANUALLY INSERT A "BOOTSTRAP LOADER PROGRAM" CAN BECOME A DISTASTEFUL TASK. SO, MANY PEOPLE ELECT TO PUT A "BOOTSTRAP LOADER" ON A "READ ONLY MEMORY" (ROM) DEVICE. A "ROM" DEVICE HAS THE ATTRIBUTE OF RETAINING IT'S CONTENTS WHEN POWER IS REMOVED. SO, WITH A BOOTSTRAP PROGRAM ON A "ROM," ONE ELIMINATES THE PROCESS OF MANUALLY LOADING IN THE BOOTSTRAP PROGRAM WHEN POWER IS SUPPLIED. THE CONCEPT OF STILL UTILIZING A "BOOTSTRAP" PROGRAM THOUGH, IS STILL APPLICABLE, BECAUSE "ROM" FLEMENTS ARE CONSIDERABLY MORE EXPENSIVE THAN TYPICAL "READ AND WRITE" (RAM) MEMORY AND THE SHORTER THE PROGRAM ON "ROM" THE LESS EXPENSIVE THE "ROM" PORTION OF THE COMPUTER!

IT'S APOUT TIME! SCELBI COMPUTER CONSULTING, INC., NOW IN IT'S 3'PD YEAP OF DELIVERING COMPUTERS TO PRIVATE INDIVIDUALS (AS WELL AS BUSINESS AND EDUCATIONAL INSTITUTIONS) HAS LONG BEEN AN ADVOCATE OF SOMEBODY PRODUCING A FULL FLEDGED MAGAZINE THAT WOULD CATER TO THE INDIVIDUAL COMPUTER OWNER. WE HAVE TRULY WONDERED WHY SOME OF THE ALPEADY ESTABLISHED FLECTPONIC MAGAZINES DID NOT AT THE VERY LEAST DEVOTE A REGULAR SECTION IN THEIP PUBLICATIONS TO THIS FAST GROWING FIELD. WE'VE HAD PROOF FROM THE THOUSANDS OF LETTERS WE RECEIVE ASKING FOR ALL KINDS OF ADVICE AND GUIDANCE THAT THE PUBLIC WANTS TO KNOW MOPE ABOUT COMPUTERS - THE KIND OF ADVICE THAT CANNOT BE PRACTICALLY DISPERSED BY A CONSULTING FIRM BUT TALENTS OF A WIDE RANGE OF WRITERS AND COVER A DIVERSITY OF SPECIAL INTEREST WITHIN THE FIELD.

WE HAVE BEEN MOST PLEASED TO LEAPN RECENTLY THAT SUCH A PUBLICATION IS NOW BEING STARTED. AND IT'S BEING STARTED BY AN ORGANIZATION WELL EQUIPPED TO HANDLE THE JOB. ANY COMPUTED OWNERS WHO ARE ALSO AMATEUR RADIO OPERATORS HAVE UNDOUBTABLY HEARD OF "73 MAGAZINE" AND IT'S PUBLISHED WAYNE GREEN. WELL, MP. GREEN HAS TAKEN THE BIG PLUNGE AND HAS STARTED ANOTHED MAGAZINE THAT IS DEVOTED TO SMALL COMPUTER OWNERS. THE NAME OF THE NEW MAGAZINE IS: BY TE. THE FIRST ISSUE IS COMING OUT IN AUGUST. IN FACT, BY THE TIME YOU RECEIVE THIS THE FIRST ISSUE SHOULD BE COMING OFF THE PRESS. THEY ARE OFFERING "CHARTER" SUBSCRIPTION RATES AT \$10.00 PER YEAR AT THE PRESENT TIME AND KNOWING THE QUALITY OF THE WAYNE GREEN ORGANIZATION, WE HAVE NO QUALMS ABOUT MAKING THE RECOMMENDATION THAT OUR READER'S CONSIDER OBTAINING A SUBSCRIPTION TO THIS NEW PUBLICATION. IF YOU ACT RIGHT AWAY, YOU SHOULD BE ABLE TO PICK UP ON THE "CHARTER" RATES. THE ADDRESS IS SHOWN BELOW.

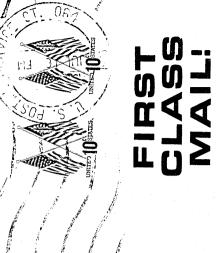

1 YEAR CHARTER SUBSCRIPTION RATE \$10.00
